

Application of PALSAR for regional assessments of forest disturbance,  
rice agriculture and wetland habitats.

William Salas  
Applied GeoSolutions (AGS)  
Durham, NH USA, [wsalas@agsemail.com](mailto:wsalas@agsemail.com)

Team includes:

- Nathan Torbick, Steve Hagen and Rob Braswell (AGS)
- Sandra Brown and Nancy Harriss (Winrock International)
- Jiaguo Qi (MSU)
- Xiangming Xiao (OU)

## Forest Disturbance Project area(s)

- **India USAID Forest-PLUS: 4 Pilot Sites**
  - ↓ Shimla- Himachal Pradesh ; Sub-tropical and temperate forest type
  - ↓ Shimoga, Karnataka State Forest Department in Bangalore, Karnataka; evergreen and semi-evergreen forests
  - ↓ Madhya Pradesh State Forest Department in Bhopal, Madhya Pradesh; Tropical Moist, Tropical Dry, Subtropical broadleaved Hill forests.
  - ↓ Sikim, Himalayia, NE India
- **Guyana**
  - ↓ Central Guyana – area with significant logging.
- **Conversion to Plantations: new NASA project: SE Asia**
- **Kalimantan – new NASA CMS project**

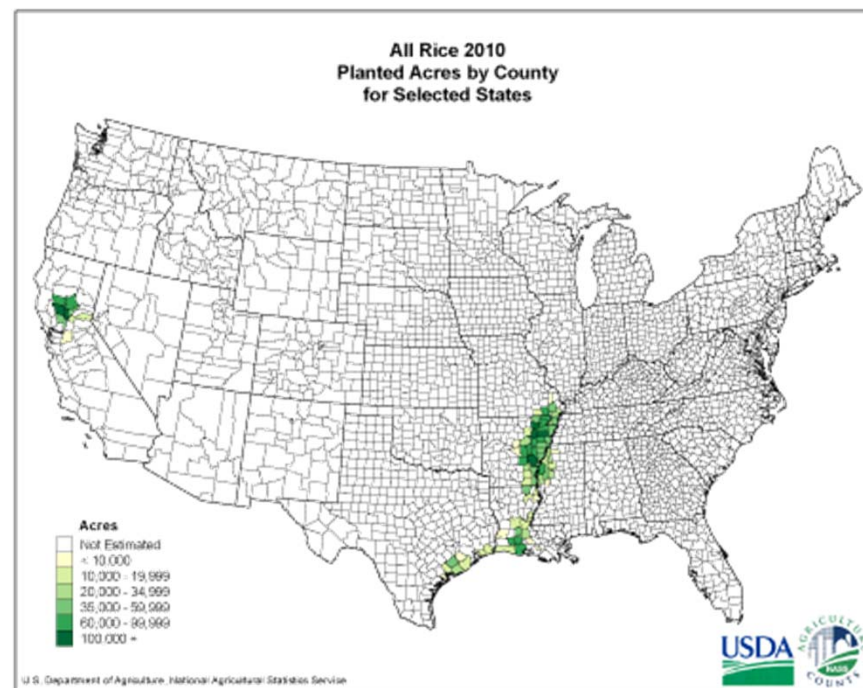

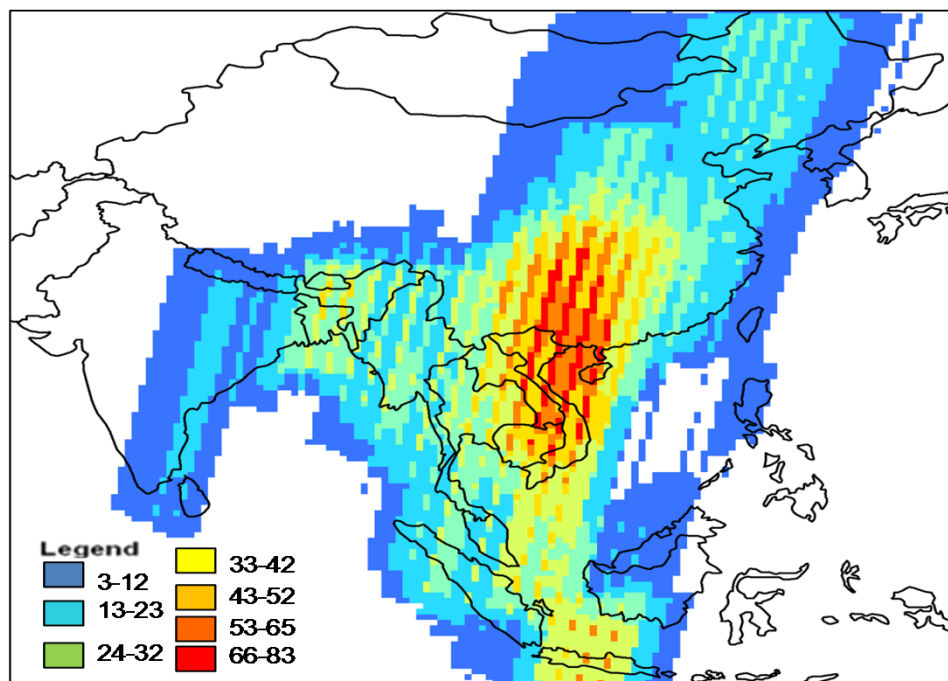

## Rice Project areas: Monsoon Asia and USA

### Multi-scale approach

Broad scale: Monsoon Asia

Local scale: cal / val sites in  
Bangladesh, China, India, Indonesia,  
Thailand, Vietnam

Sacramento Valley & Midsouth

## **Phase 3 Objective: Move to GHG MRV & Decision Support Applications**

- Map rice agricultural intensification across Monsoon Asia
- Evaluate remote sensing tools (PALSAR and optical) for mapping forest structure and degradation in India, Guyana and SE Asia
- Develop rice GHG MRV prototype for in Vietnam
- Implement greenhouse gas (GHG) emission reduction offset verification system rice offset protocols
- Provide geofield photo database to support JAXA cal / val

## **Phase 3 Objective: Move to GHG MRV & Decision Support Applications**

- Map rice agricultural intensification across Monsoon Asia
- Evaluate remote sensing tools (PALSAR and optical) for mapping forest structure and degradation in India, Guyana and SE Asia
- Develop rice GHG MRV prototype for in Vietnam
- Implement greenhouse gas (GHG) emission reduction offset verification system rice offset protocols
- Provide geofield photo database to support JAXA cal / val

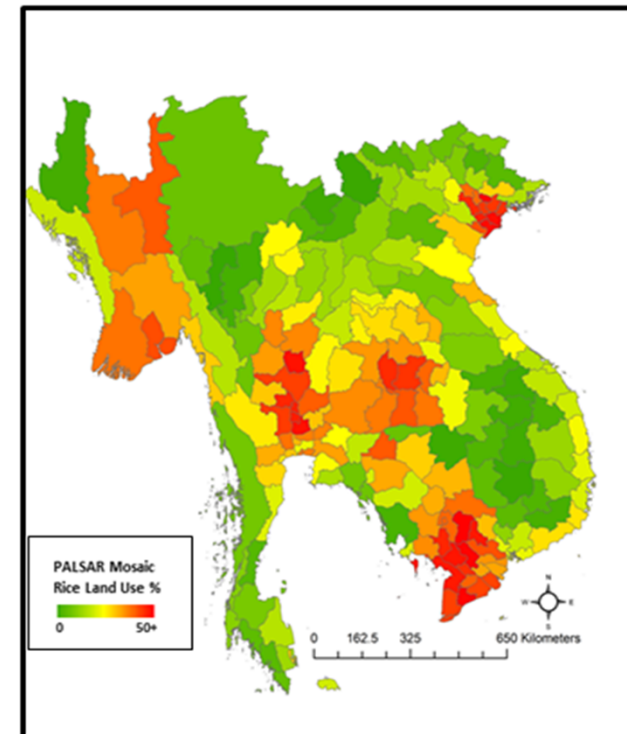

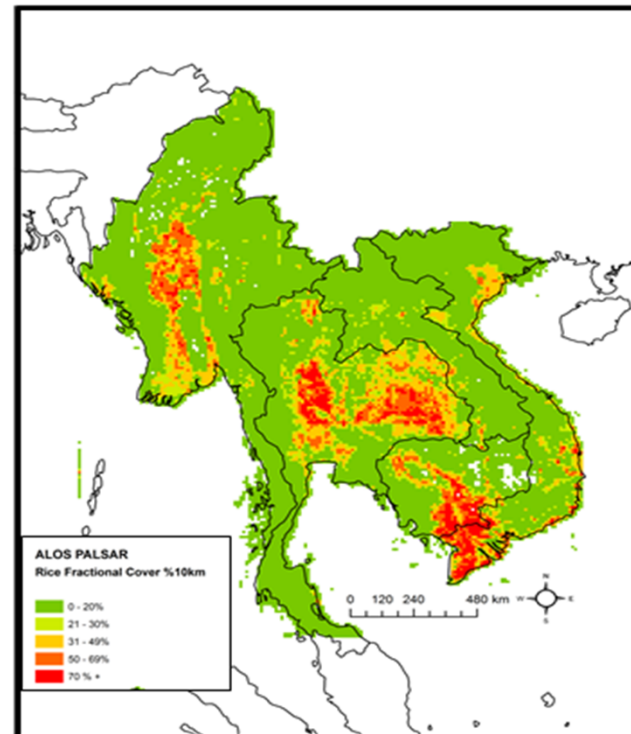

## **Quantifying changes in agricultural intensification and expansion in monsoon Asia during 2000-2010**

- ❑ NASA Land Cover and Land Use Change (2011-2014)
- ❑ Final year of project and product production
- ❑ Maps of rice extent, cropping intensity, and production
- ❑ Pilot products and early publications completed
  - Poyang Lake, Java, Thai Binh, Bagerhat, Karnal, etc...

## Deliverables

Planned output of the project.

- Maps of rice extent and now integrating recently provided ScanSAR mosaics for updated maps of extent, cropping intensity, and production planned by end of Phase 3
- Change products for hot spot production regions across SE Asia

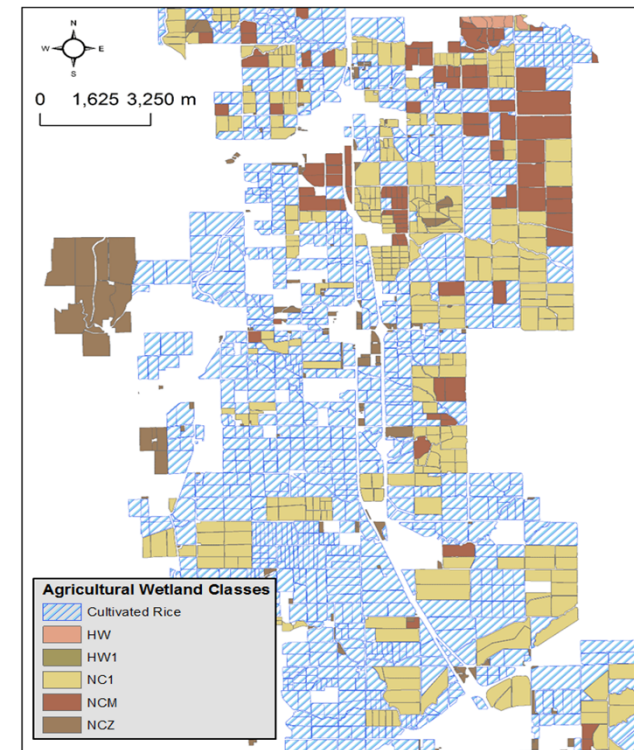

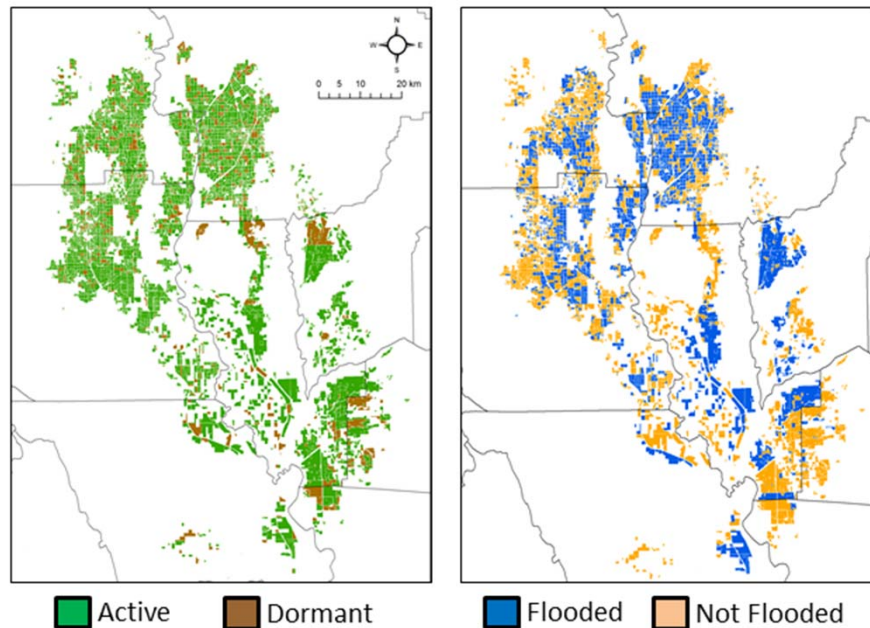

## Deliverables

Describe the planned output of your project.

- Maps of rice and wetland habitat in California using PALSAR strips and Landsat
- Manuscript to Wetlands, Ecology, and Management

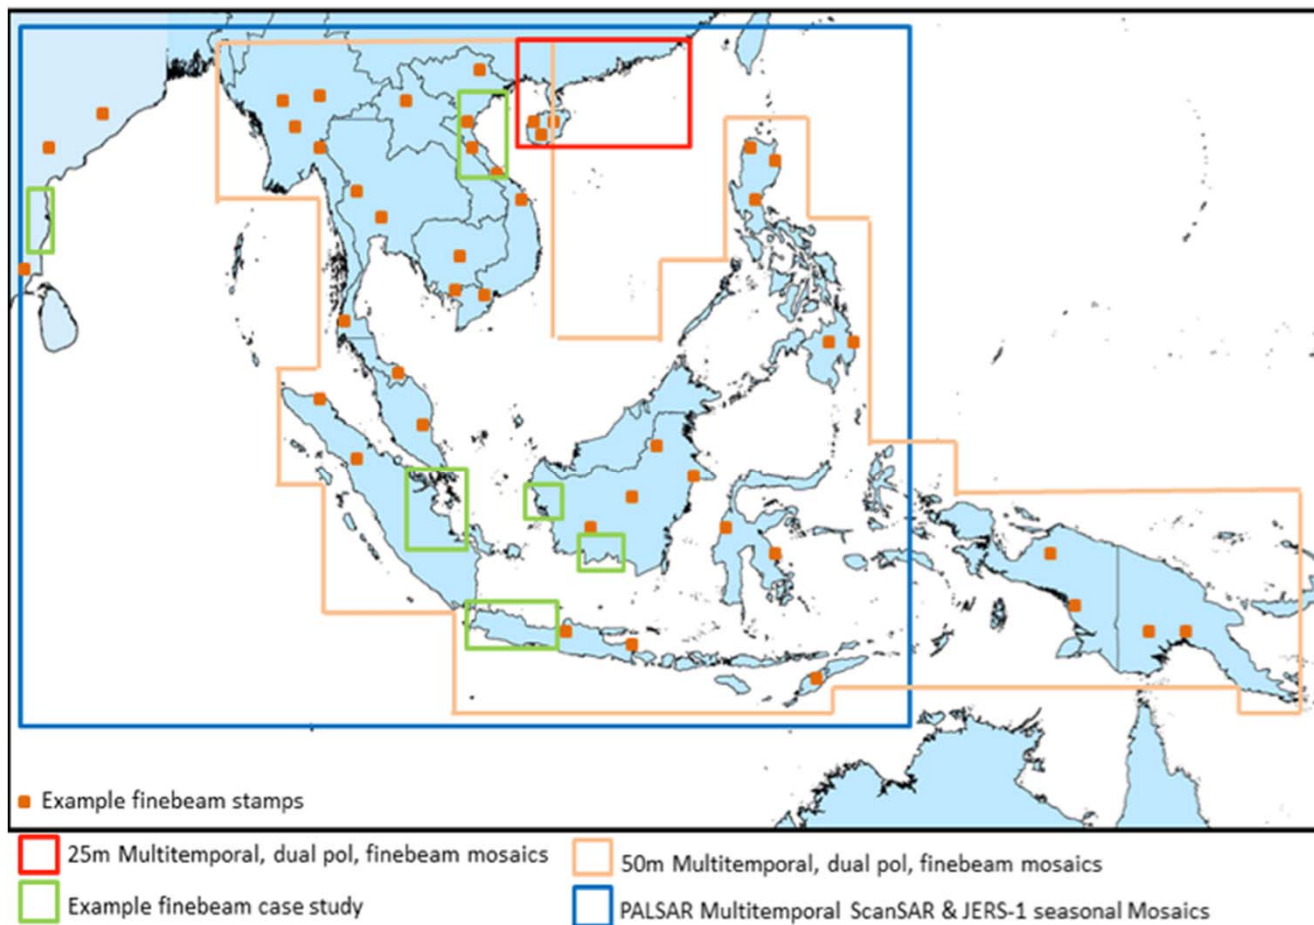

## **Mapping industrial forest plantations in tropical monsoon Asia through Landsat, MODIS, PALSAR & JERS-1**

- ❑ NASA Land Cover and land Use Change (2014-2016)
- ❑ Team members
  - Xiao Xiangming & Jinwei Dong, University of Oklahoma
  - William Salas & Nathan Torbick, Applied Geosolutions
  - International Collaborators from China, Indonesia, Laos, Malaysia, Myanmar, Philippines, Thailand, and Vietnam

## Plantation project area: Monsoon Asia

## Project objectives and schedule

- ☐ 1. Develop in-situ data of forest plantations, including geo-referenced field photos and build citizen scientists across regions
- ☐ 2. Map the area and spatial distribution of industrial forest plantations in tropical monsoon Asia
  - ↓ 2015 Landsat 8 (OLI) and ALOS-2 PALSAR
  - ↓ 2010 Landsat 5/7 (TM/ETM+) and ALOS-1 PALSAR
  - ↓ 2005 Landsat 5/7 (TM/ETM+) images
  - ↓ 2000 Landsat 5/7 (TM/ETM+) and JERS-1 images in 1996-2000

List the project milestones from now to March 2014 (the end of project)

- ☐ Project kick off and year 1 workshop for Fall 2014
- ☐ Pilot site field data collection and image processing

## Support to JAXA's global forest mapping effort

Mapping industrial forests / plantations  
across SE Asia using PALSAR

Help assess / support forest layers such as  
masks, forest type, change maps

Provide thousands of field photos for cal / val  
and support algorithm development

Provide forest biometrics at subset of regions  
for supporting JAXA product development

## Deliverables

Describe the planned output of your project.

- ☐ Time series maps of forest plantations at 5 year intervals 2000 – 2015
- ☐ Forest masks and data layers with PALSAR based algorithms
- ☐ Geofield photos & assessment of JAXA forest maps at strategic locations
- ☐ Dong, J., Xiao, X., Chen, B., Torbick, N., Jin, C., Zhang, G., Biradar, C., 2013. Mapping deciduous rubber plantation through integration of PALSAR and time-series Landsat imagery. Remote Sens Environ 134, 392-402.

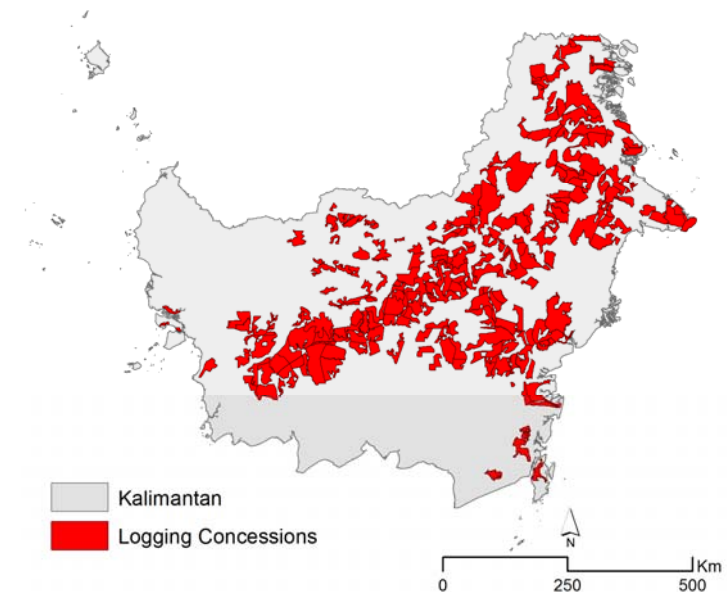

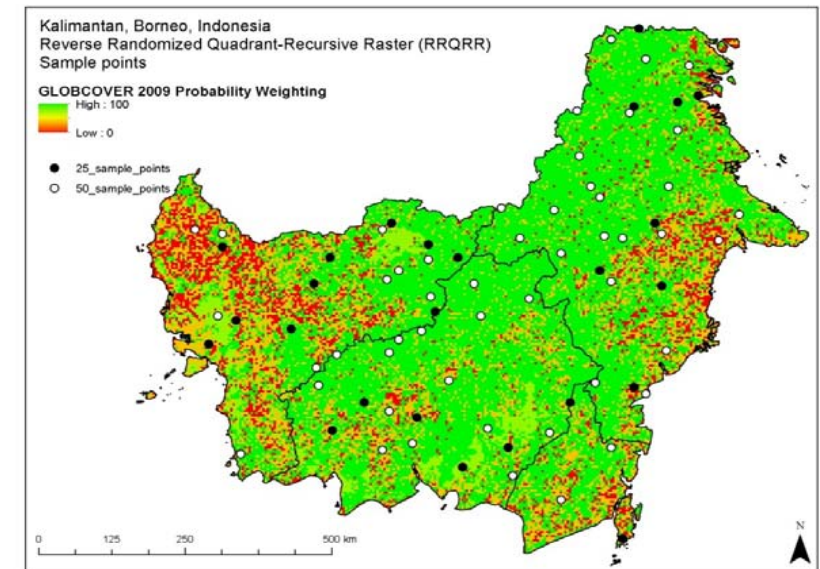

## Operational multi-sensor design for national scale forest carbon monitoring to support REDD+ MRV

- NASA-funded Carbon Monitoring System project (2013-2016)
- Team members:
  - ↓ Stephen Hagen (PI), William Salas, & Rob Braswell at Applied GeoSolutions
  - ↓ Nancy Harris and Sandra Brown at Winrock International
  - ↓ Sassan Saatchi at the Jet Propulsion Laboratory
  - ↓ Michael Palace at the University of New Hampshire
  - ↓ Dirk Hoekman at Wageningen University in the Netherlands
  - ↓ Deborah Lawrence at the University of Virginia
  - ↓ Orbita Roswintiarti, LAPAN in Jakarta
- Project region: Kalimantan, Indonesia
- Project objectives:
  - ↓ Develop an uncertainty tracking system for NFMS
  - ↓ Map carbon emissions associated with degradation using LiDAR and radar
  - ↓ Produce improved wall-to-wall forest carbon stock maps using LiDAR, radar, & optical

## Our CMS Project Goals

- Assist REDD+ stakeholders in Indonesia by contributing data products & improved forest monitoring methods
- Develop improved methods (e.g. mapping biomass, activity, and carbon loss from degradation; tracking uncertainty) that are useful across regions.
- Evaluate commercially available RS data sources (focus of CMS NRA)

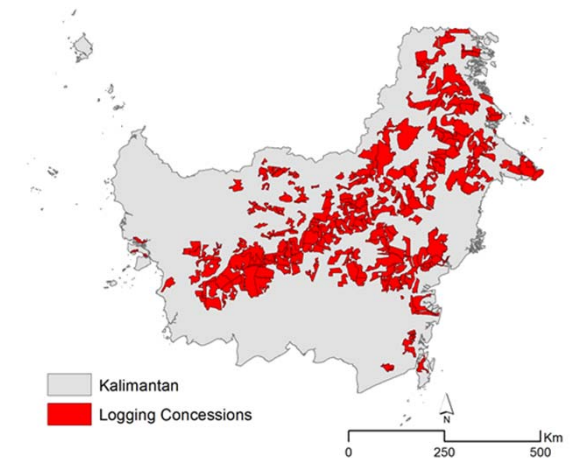

## Our CMS Project Details

- Collect commercial airborne LiDAR data from 30 randomly selected transects across Kalimantan.
- Measure forest structure and biomass in the field (~5 regions) and measure forest carbon flux associated with logging in the field (~3 regions).
- Relate LiDAR to forest carbon in multiple types of forests, including degraded areas.
- Calibrate radar and optical data to the field and LiDAR observations to map forest carbon stocks across Kalimantan and estimate carbon associated with logging.
- Create software tools to track uncertainty from the field sampling and measurements through final wall-to-wall maps.
- Essentially, we are building & refining the components of an MRV (NFMS) system for Kalimantan.

## Our CMS Project Field Data Collection

- Collecting two types of field data across Kalimantan:
  - ↓ Forest structure for above ground biomass estimation
    - i dbh
    - i tree height
    - i canopy dimensions
  - ↓ Estimate of carbon loss due to logging
    - i size of tree stumps
    - i maps of skid trails and logging decks
    - i coordinates and size of other downed trees
- The data will be collected from four regions (2 biomass and 2 degradation focused). Each region will have between 10 and 50 samples measured.

## India Forest Plus

- Partnership for Land Use Science (FOREST-PLUS)
- USAID funded (~15 million USD, 5 year project)
- Team: TetraTech ARD, Applied Geosolutions and MSU
- AGS/MSU Goals: Develop MRV system; demonstration of RS, GIS and field sampling at 4 landscape sites; and training
- Stakeholders in India: MOEF, FSI and SFD

## India Forest Plus: Initial Scoping Indicates

- **FSI desire for SAR capabilities to:**
  - support forest carbon,
  - forest loss and degradation mapping and
  - design of field sample plot stratification.
- **Opportunity for 4 new landscape sites: different forest types (gradient S to N), FSI field plots**
  - Additional field data for validation of JAXA FNF products.
  - Additional field data on forest structure and biomass
  - Demonstration sites for application of PALSAR for REDD+
  - Integration of PALSAR into the MRV system for GOI/FSI
- **Focus of Phase 4 proposal**
  - Additional mosaics to cover 4 landscape demonstration sites  
India

**USAID**  
FROM THE AMERICAN PEOPLE

# Pilot Rice Measurement, Reporting and Verification System

**Analysis and Investment in Low Emissions  
Growth (AILEG): Vietnam Pilot**

**A I L E G**

## Rice MRV System: Motivation

### The Challenge

- A monitoring, reporting and verification (MRV) system for GHG emissions in the agriculture sector does not exist in Vietnam, nor do robust country-specific emission factors for rice cultivation.

### The Solution

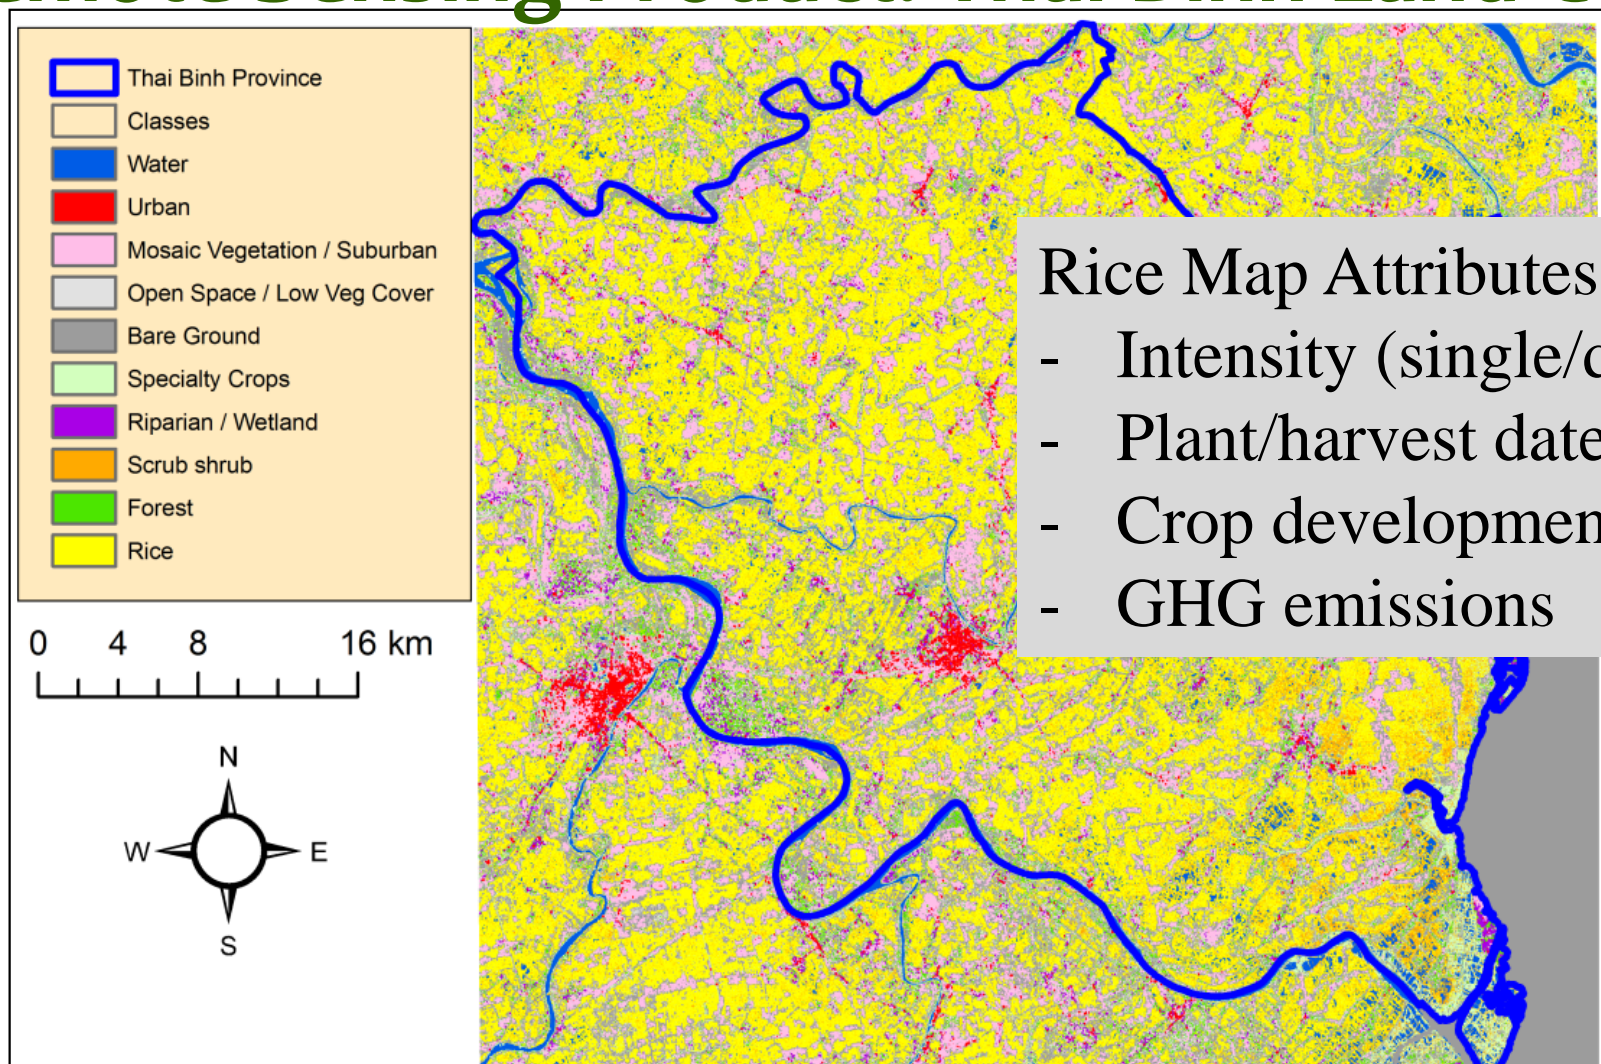

- A MRV tool for the rice cultivation in Vietnam could help with national reporting on GHG emissions and explore emissions trajectories for policymaking

## Rice MRV System: Components

- ☐ Field data collection tools: Mobile apps
- ☐ Remote sensing algorithms/tools for mapping and monitoring rice production.
  - ↓ Mapping rice acreage by growing season
- ☐ Spatial Data Infrastructure: GIS databases
  - ↓ Spatial data for regional modeling
- ☐ GHG modeling tool: DNDC model
  - ↓ Used to scale up site emissions to provincial scale
  - ↓ Could include a TIER 2 system for rice
- ☐ Open source web GIS system
  - ↓ For data dissemination, tracking and visualization.

## Remote Sensing Product: Thai Binh Land Cover

### Rice Map Attributes:

- Intensity (single/double)
- Plant/harvest dates
- Crop development
- GHG emissions

- Mapping LULC, rice, inundation, cropping intensity, calendar
- Parameterizing model, scaling, and monitoring activities

## Support to JAXA' s global forest mapping effort

- Help cal /val with geofield photos and survey attributes
- Compare with MODIS & Landsat forest map products (evergreen, deciduous, rubber, etc...) (products developed by Xiao et al.)

List ground truth data that will be shared with JAXA

- **Global Geofield photos (>57,000 GPS points, most with land cover information from field survey).**
- **Vietnam: Thanh Hoa and Nghe An provinces (700 field photos with gps and land cover descriptions - 2013**
- Forest biometric data from northeast USA and Cerrado (Brazil).
- New field data from India Forest-PLUS, NASA Indonesia CMS and NASA SE Asia Plantations projects.

Thank you.
