

K&C Phase 3

APPLICATION OF ALOS PALSAR FOR ABOVE GROUND BIOMASS ESTIMATION IN SEVERAL TYPES OF WETLAND VEGETATION (PEAT SWAMP, SWAMP AND MANGROVE), DRYLAND FOREST AND PLANTATION FOREST IN INDONESIA

I Nengah Surati Jaya, Ph.D

**Professor at the Laboratory of Forest Resource Inventory,
Faculty of Forestry, Bogor Agricultural University
INDONESIA.**

Deliverables

BACKGROUNDS

□ Based on Biogeography:

1. 3 ecoregion:

- ↓ (A) Sunda land: Java, Sumatra, and Kalimantan ,
- ↓ (B) Wallacea” Sulawesi & Maluku
- ↓ (C) Sahul : Papua.

2. Agro climatic. Physiographic, Lithologic type and Landforms: 414 land system (from very wet to very drought ecosystem).

ECOSYSTEM TYPES

Forest ECOSYSTEM : → 13 FOREST TYPES

- 1. Peat swamp forest (PSF): → ramin (*Gonystylus spp.*)**
- 2. Swamp forest: meranti / dipterocarp**
- 3. Mangrove: avicenia, barringtonia, bruguiera, rizhopora etc**
- 4. Dry land forest**
- 5. Mountain forest, sub-mount savana, kerangas, sub alpine, alpine etc**

CARBON POOLS

- 1. Focus: above ground biomass (dry land forest) & Soil and peat in peat swamp forest**
- 2. Now , the remote sensing technique allows land cover change assessment using time series of remotely sensed imageries → quantitative approaches**
- 3. It is very useful for carbon stock change analysis at landscape level (ecosystem level).**
- 4. At this point, it is actually possible to calculate volume of carbon → REDD/MRV at certain level (Tier 1 or Tier 2).**

Project objectives and schedule

- 1. Develop algorithm for estimating biomass stock at several types of forest ecosystem**
- 2. To develop a sampling strategy for estimating biomass stock in several forest types in Indonesia (carbon pool)**
- 3. Develop a forest classification scheme using ALOS PALSAR**
- 4. Identify the stand factors affecting the backscatter behaviour (classif strategy)**

.

DATA ANTICIPATION

- **ALOS PALSAR FBD (HH+HV) mosaics at 25 m pixel spacing (2007, 2008, 2009, 2010)**
- **JERS-1 SAR (HH) mosaics at 25m pixel spacing (mid 1990's)**
- **ALOS PALSAR ScanSAR (HH) mosaics at 100 m pixel**
- **AVNIR and PRISM**

GENERAL APPROACH

1. Pixel based based classification, subspace classification
2. Forest covers (category) development
3. Ground truth data collection: (field survey and/or existing field survey data – IHMB/other researches)
4. Identification of stand variables affecting the backscatter
5. Develop a forest classification scheme using PALSAR
6. Develop biomass estimation model using PALSAR.

SUPPORT OF K&C THEMATIC DRIVERS

(Carbon cycle science, International Conventions,
Environmental Conservation)

1. Forest cover → Sustainable forest management (annual harvesting)
2. Forest/ environmental conservation (spatial forest planning)
3. Carbon trade (REDD+, estimation carbon stock/ carbon pool)
4. Reforestation/forest restoration

.

SUPPORT OF K&C THEMATIC DRIVERS

(Carbon cycle science, International Conventions,
Environmental Conservation)

1. Forest cover → Sustainable forest management
(annual harvesting)
2. Forest/ environmental conservation (spatial
forest planning)
3. Carbon trade (REDD+, estimation carbon stock/
carbon pool)
4. Reforestation/forest restoration

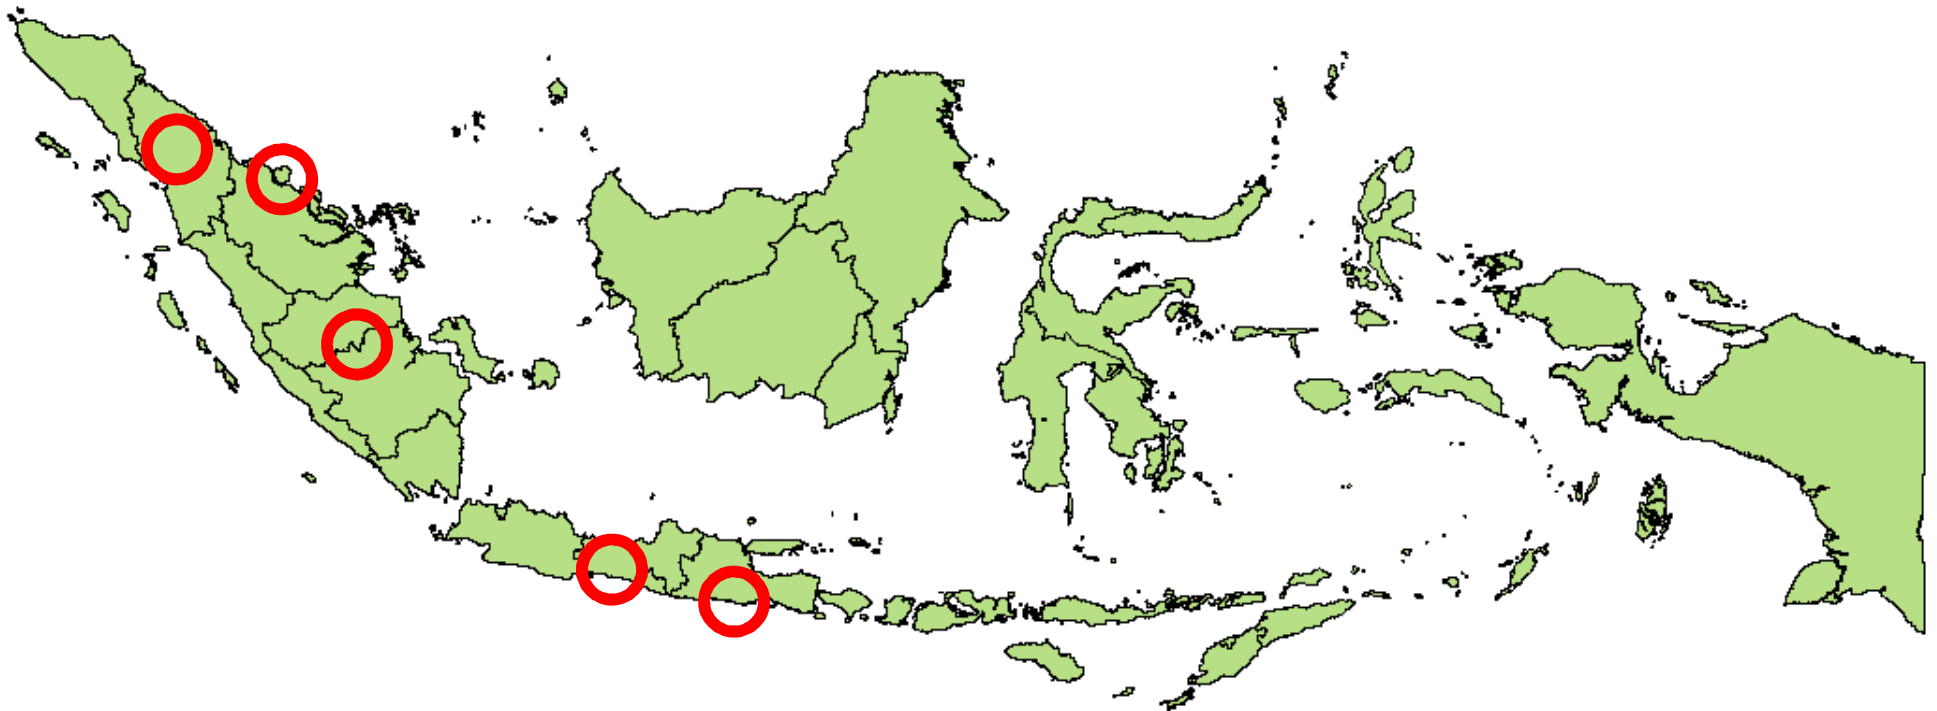

.

Project milestones and schedule

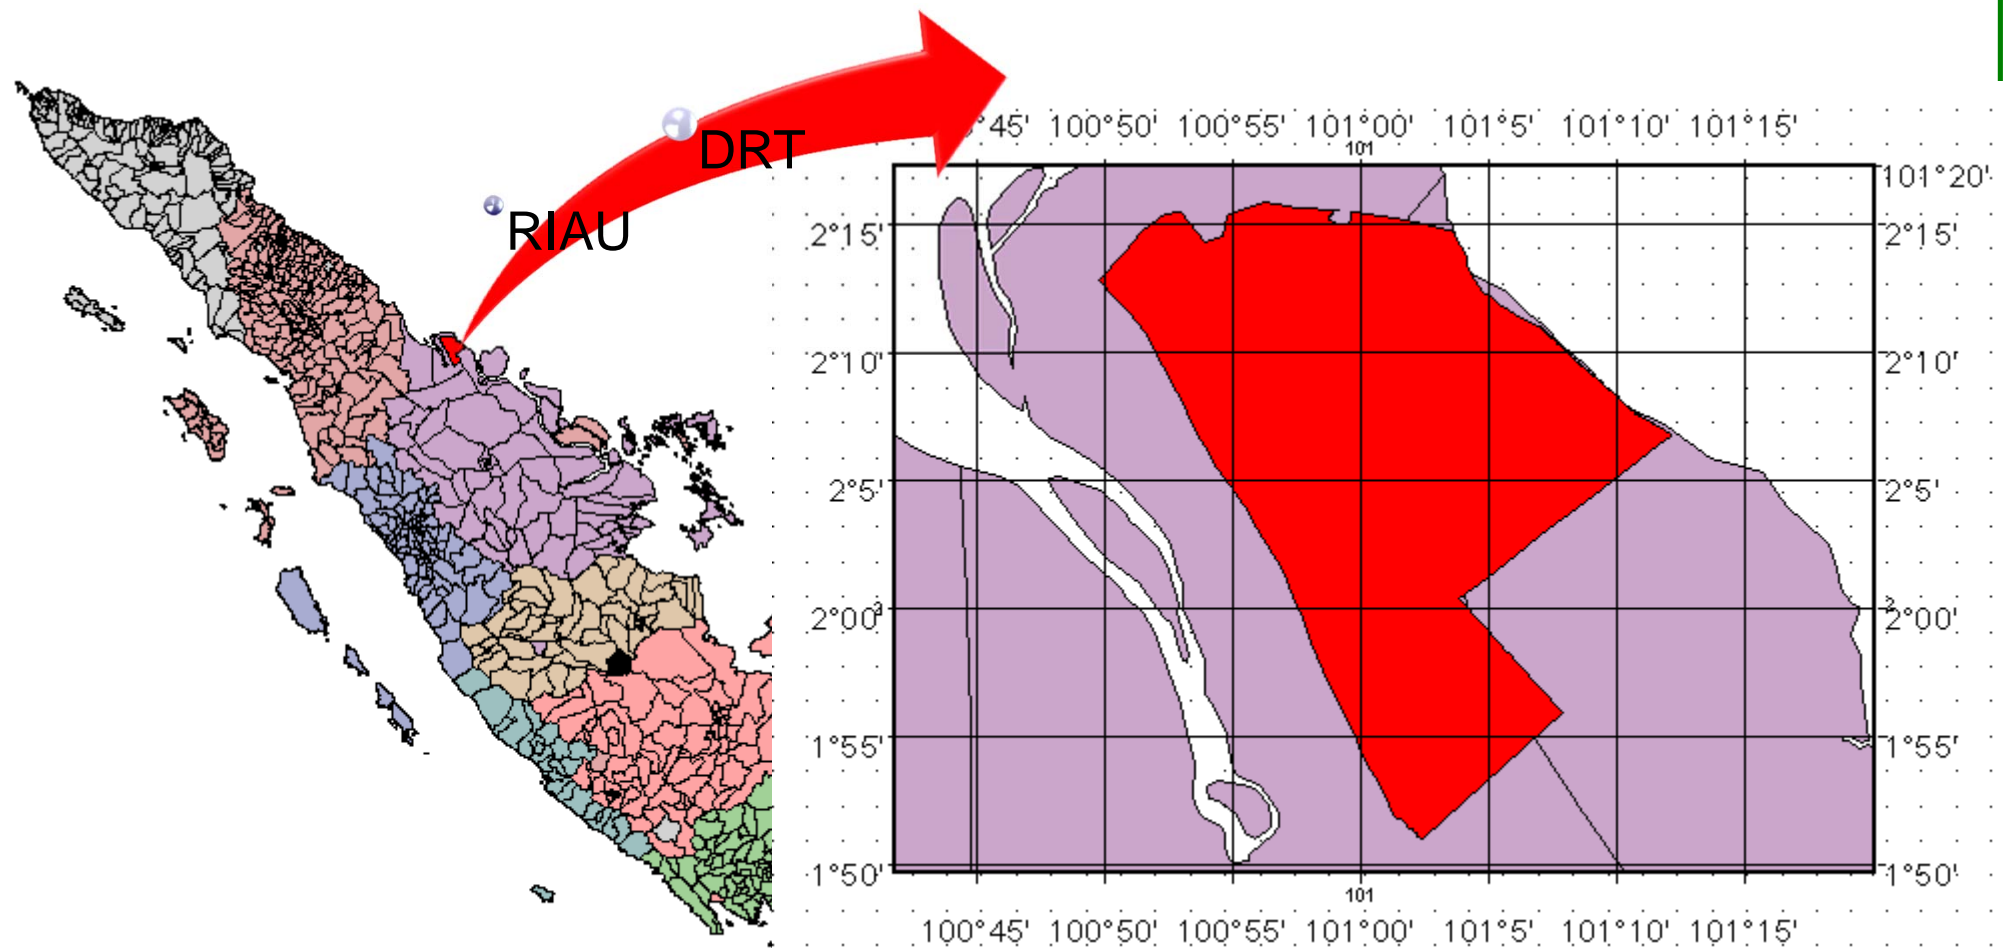

- 1. Variables of stand affecting backscatter char of PALSAR is identified - 2012/13**
- 2. Forest classification scheme - 2012/13**
- 3. Biomass estimation model -2013/14**
- 4. Accuracy assessment of biomass at each forest type & Validated Landcover Map 2013/14**

Project area(s)

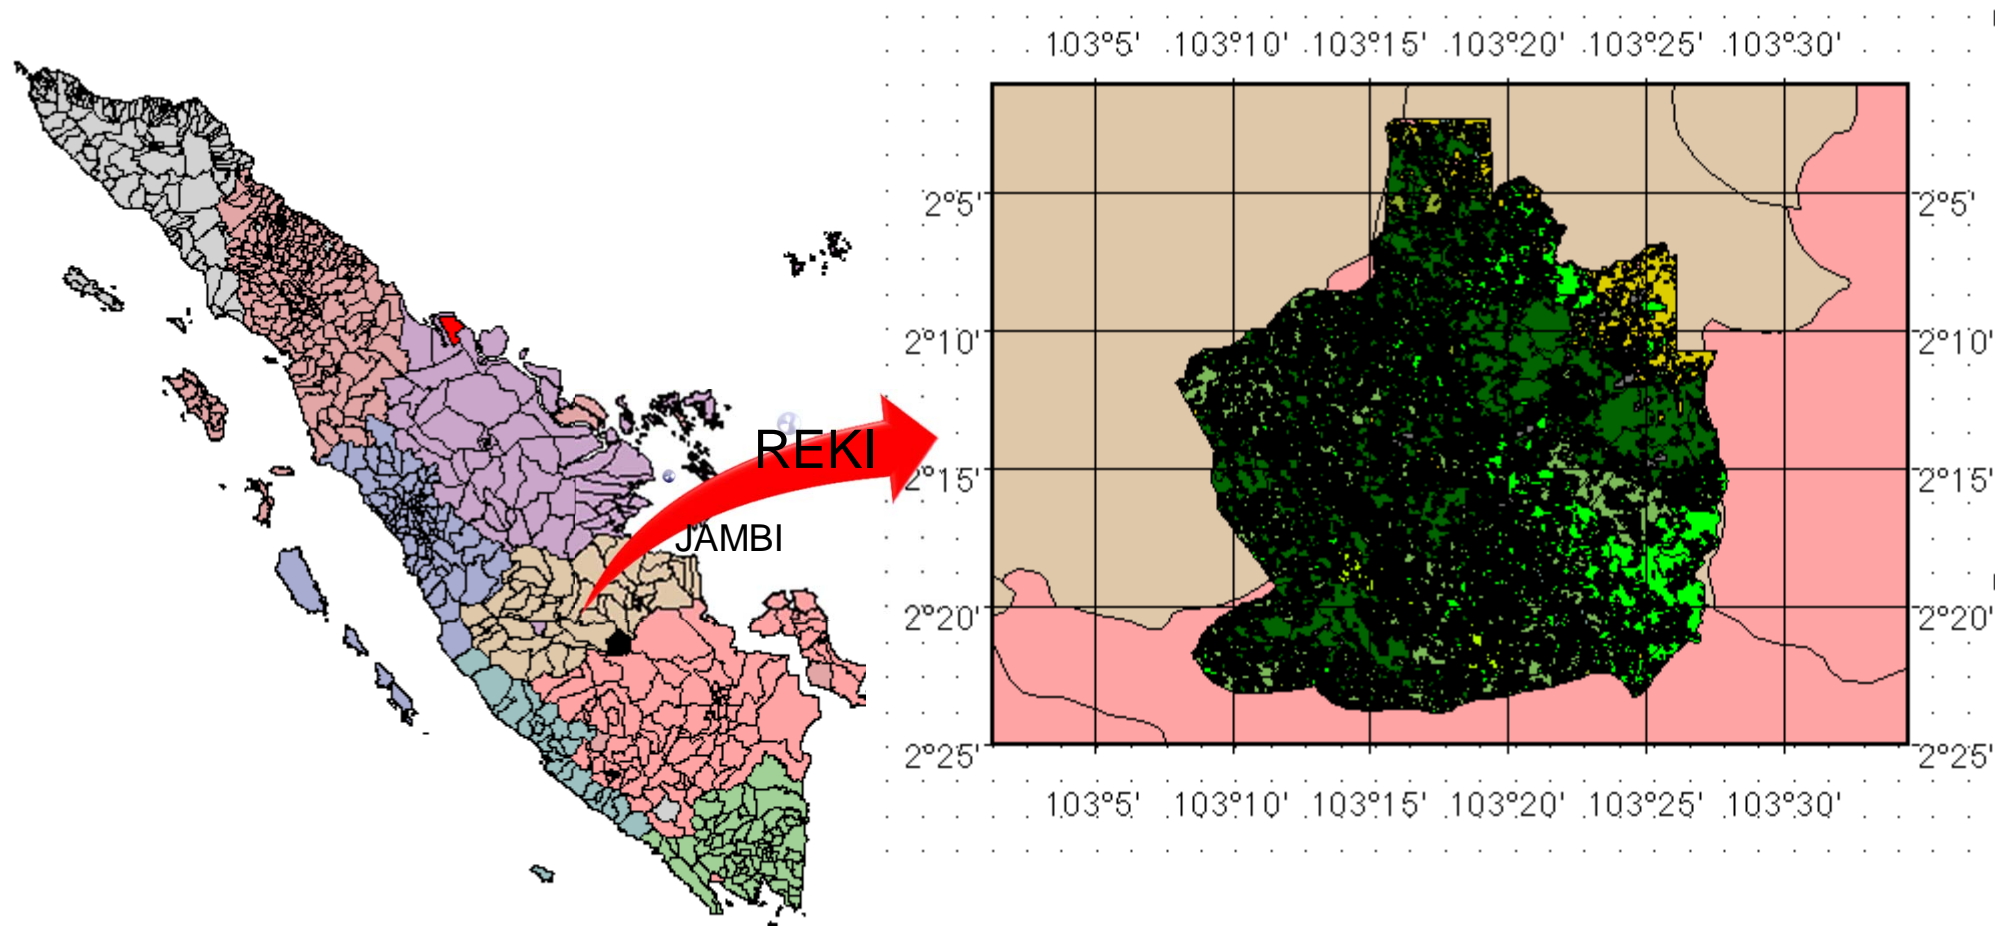

1. Sumatera : 3 sites (North Sumatera, Riau, Jambi/South Sumatera)
2. Java : 3 site (KPH MADIUN, cilacap & Kebon

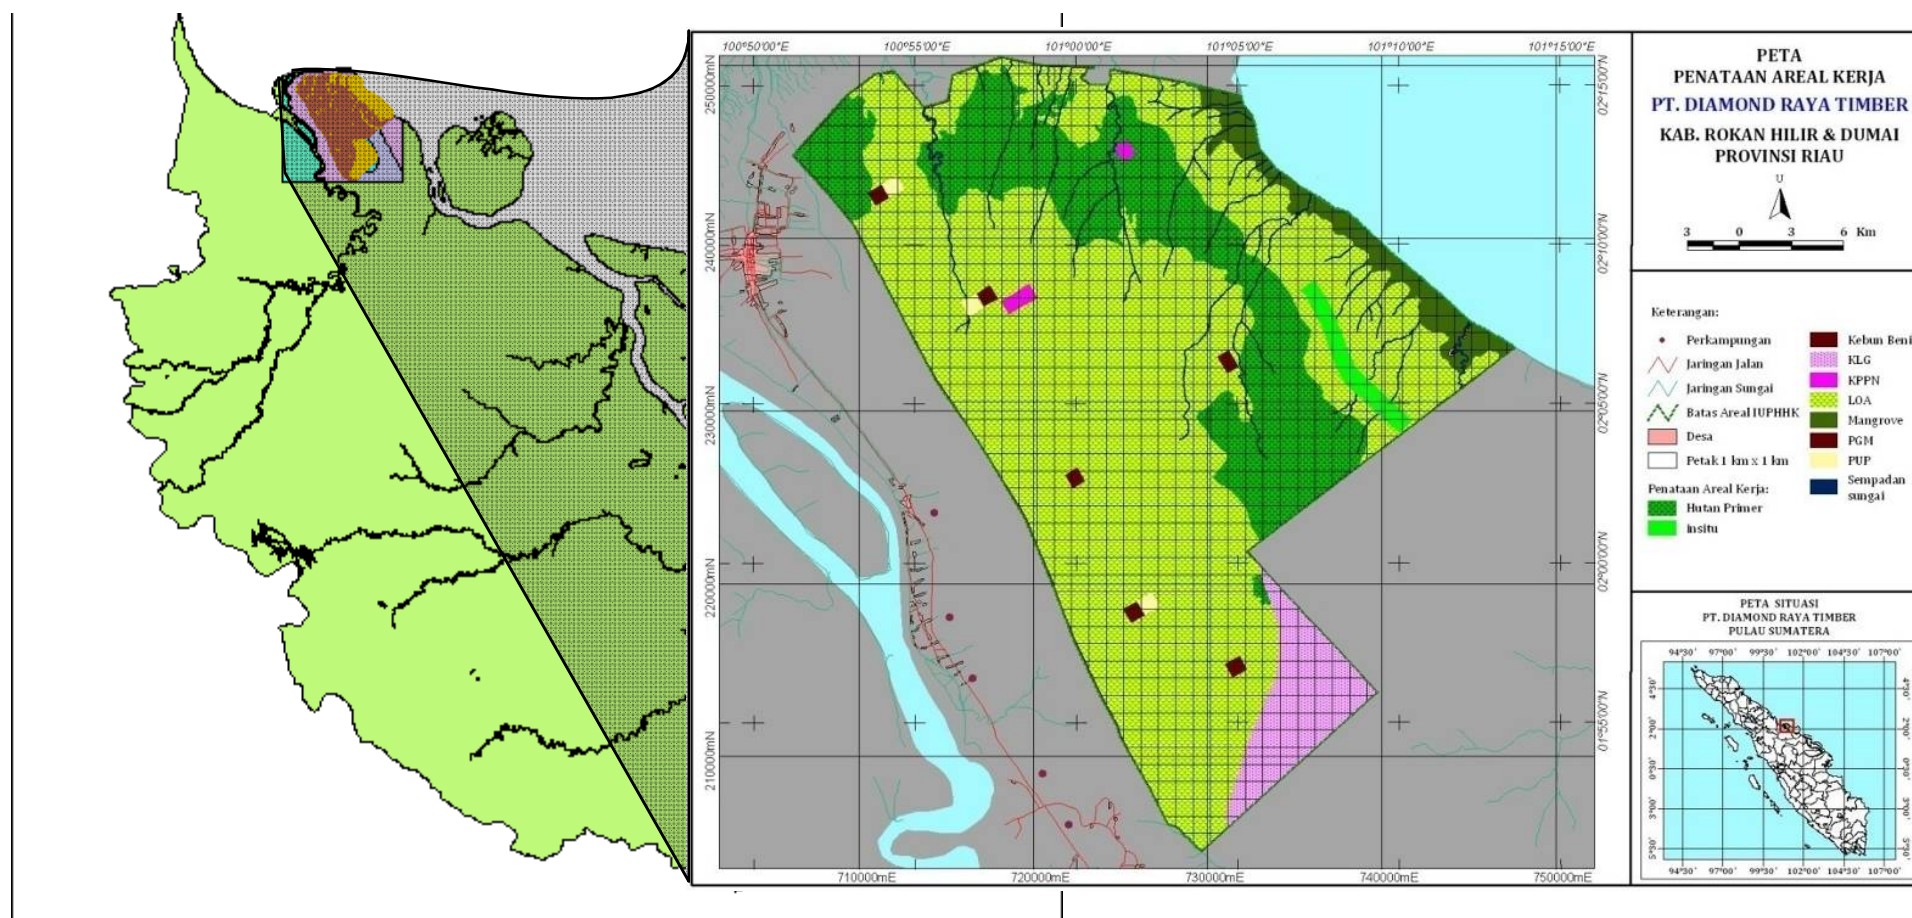

Study site 1: will be the peat swamp forest in Rokan Hilir District, Dumai Regency, Riau Province, located between 100°00' E and 102°00' E; and between 01°00' N and 03° 00' N

2. JAMBI & SOUTH SUMATERA (DRY LAND FOREST, PT REKI)

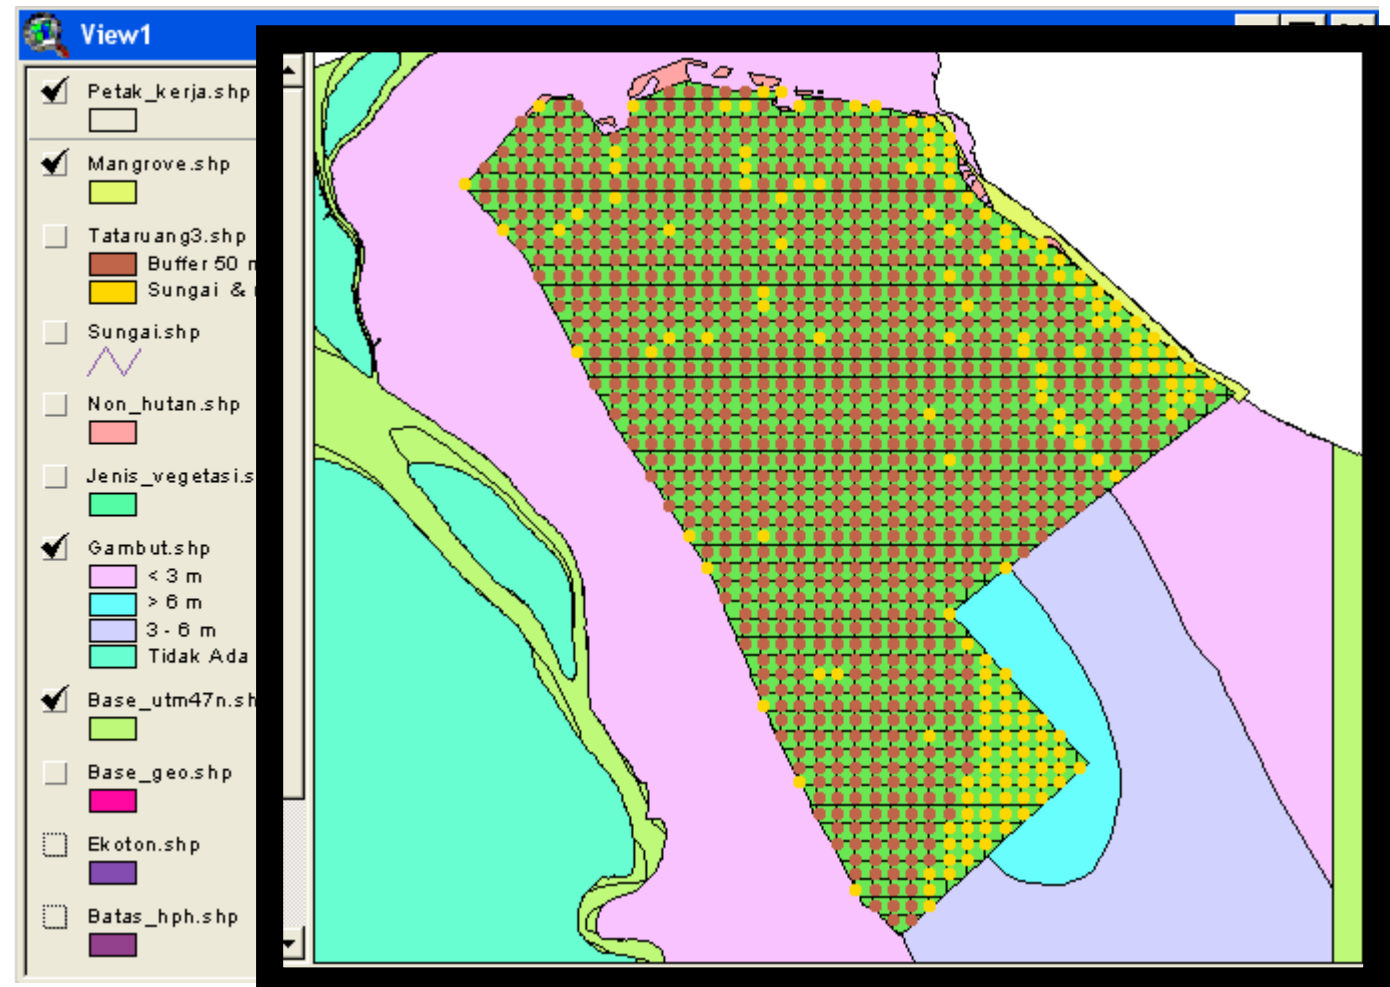

Site 1 DRT Concession Forest in Riau

Field plot distribution

- Diamond Raya Timber Comp area (peat swamp forest).

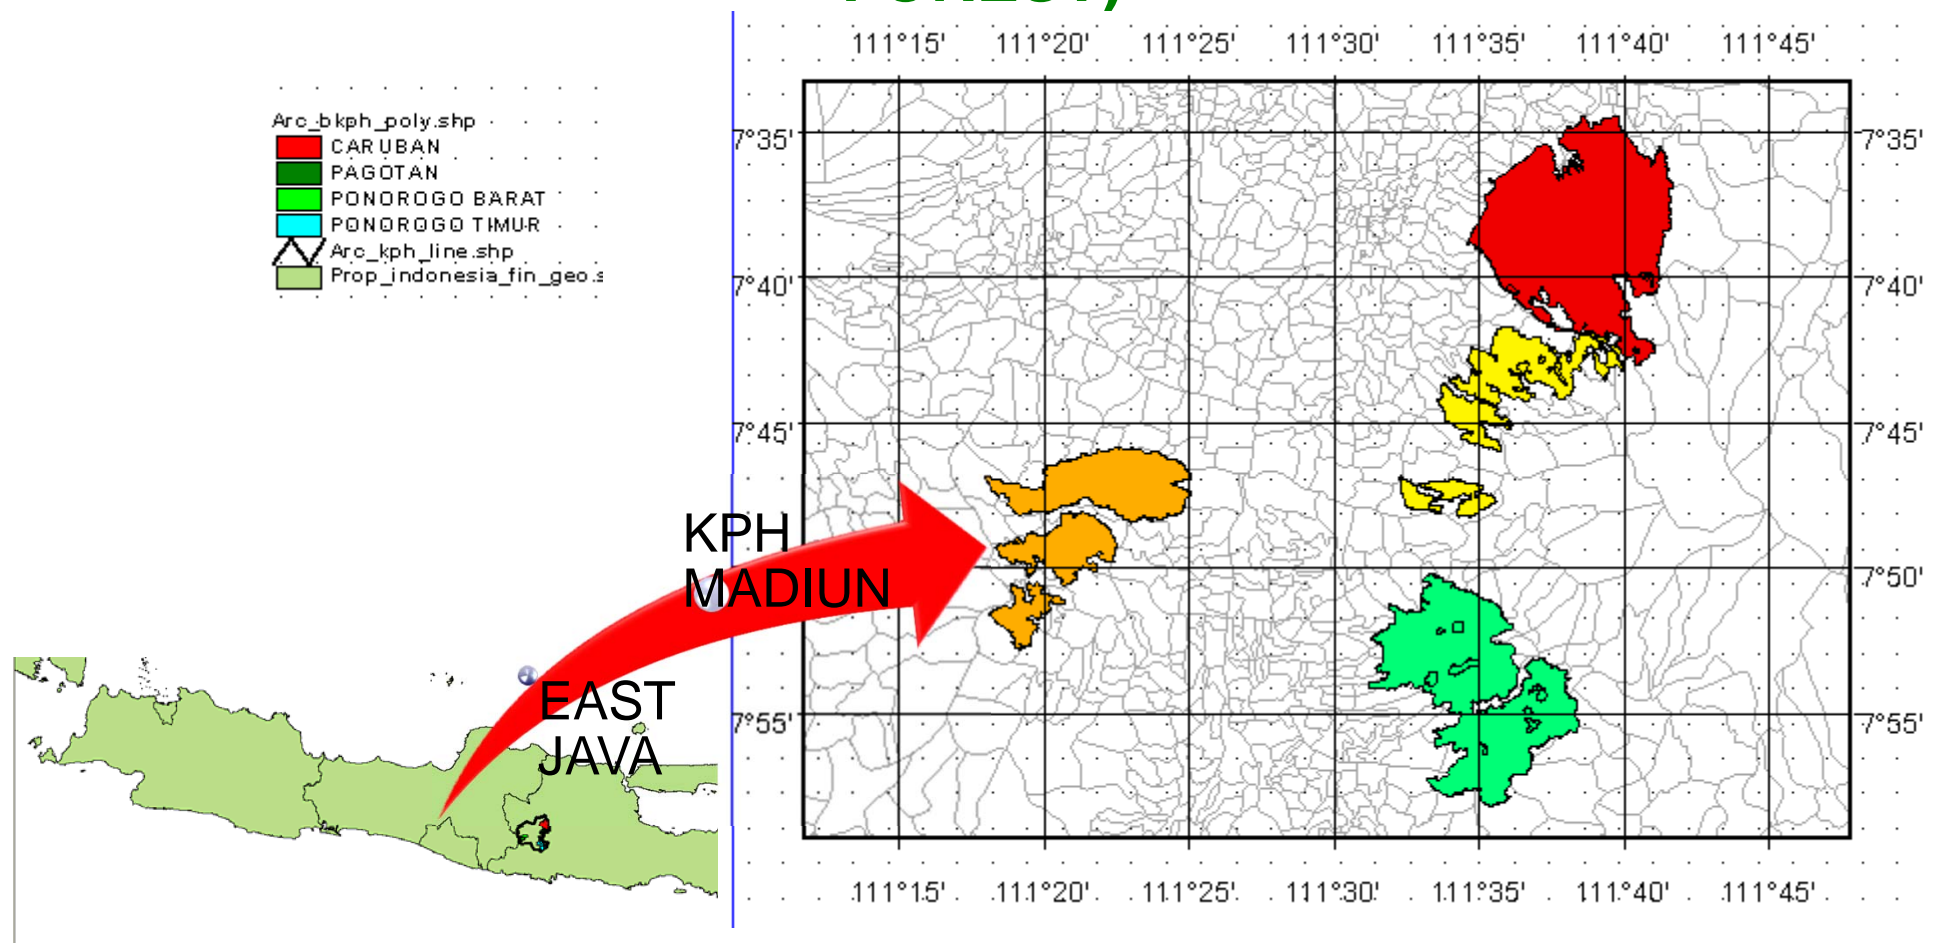

Study site 3: includes dryland forest and Eucalyptus plantation forest in North Sumatera), located between 98°00' E and 99°00' E; and between 2°00' N and 03°

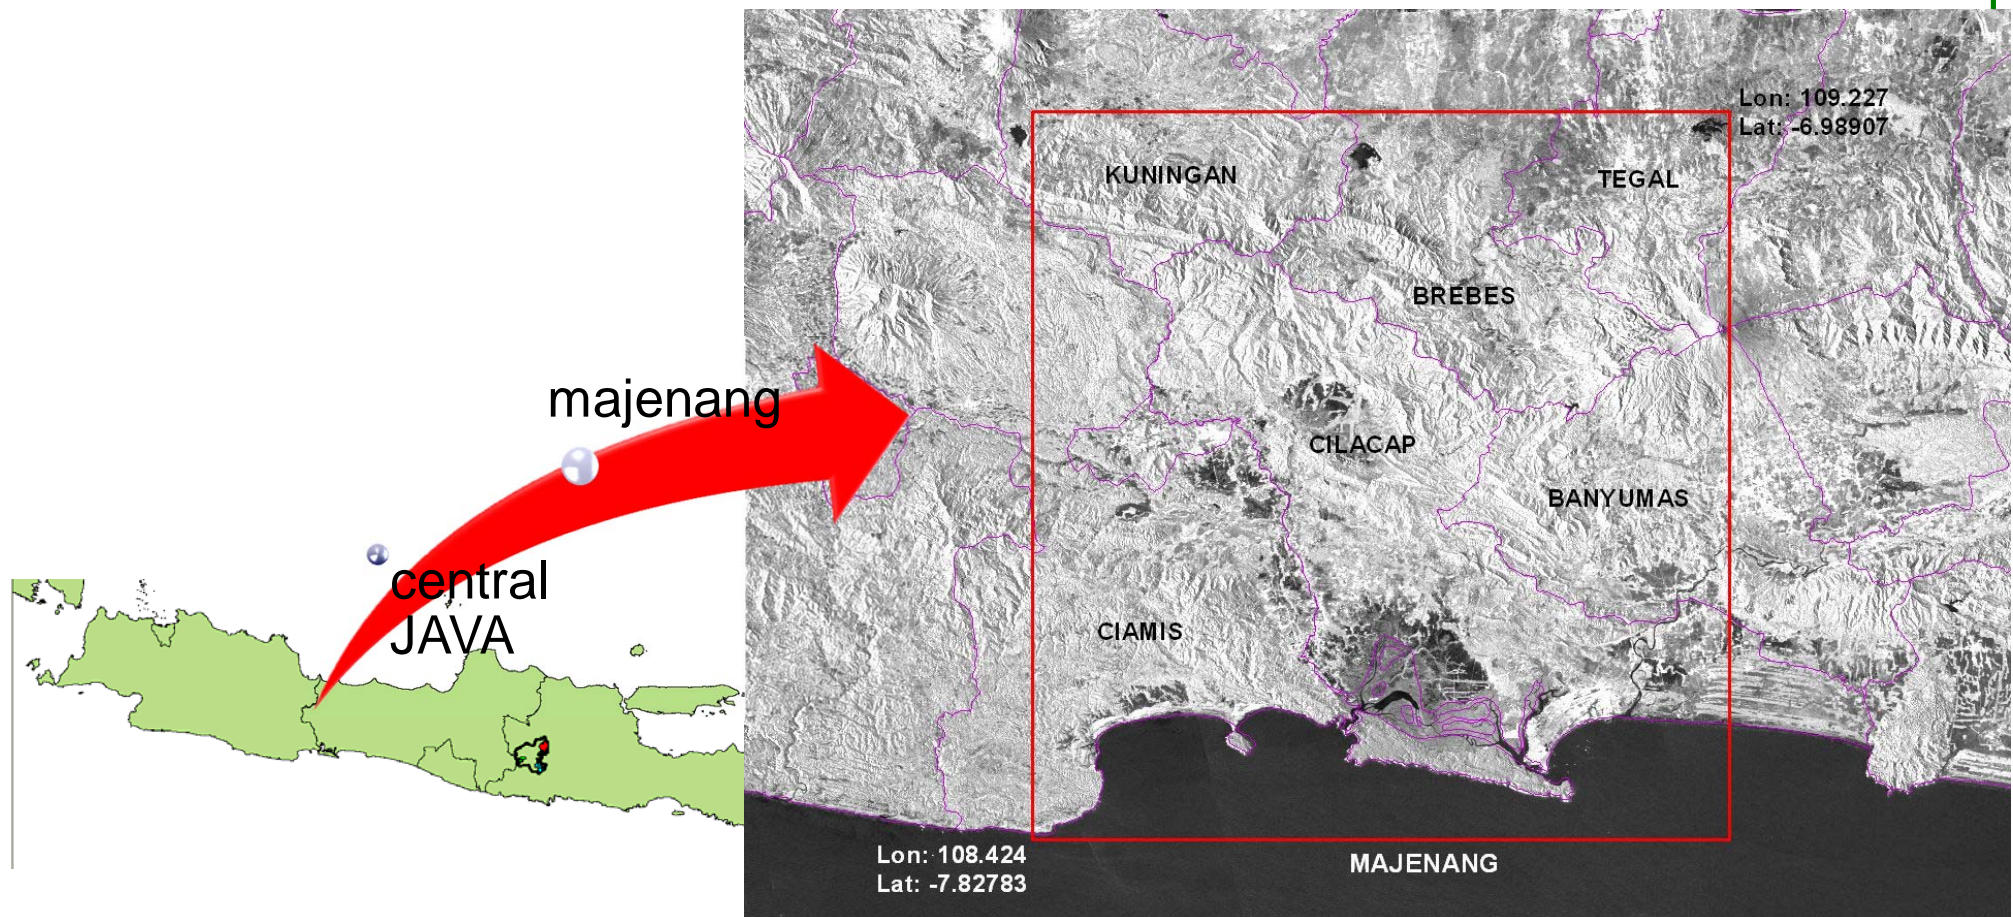

**Study site 4: includes rubber and oil palm estate crop
in North Sumatera,), located between 98°30' E and
100°00' E; and between 02°30' N and 04° 00' N**

5. KPH MADIUN, EAST JAVA (TEAK PLANTATION FOREST)

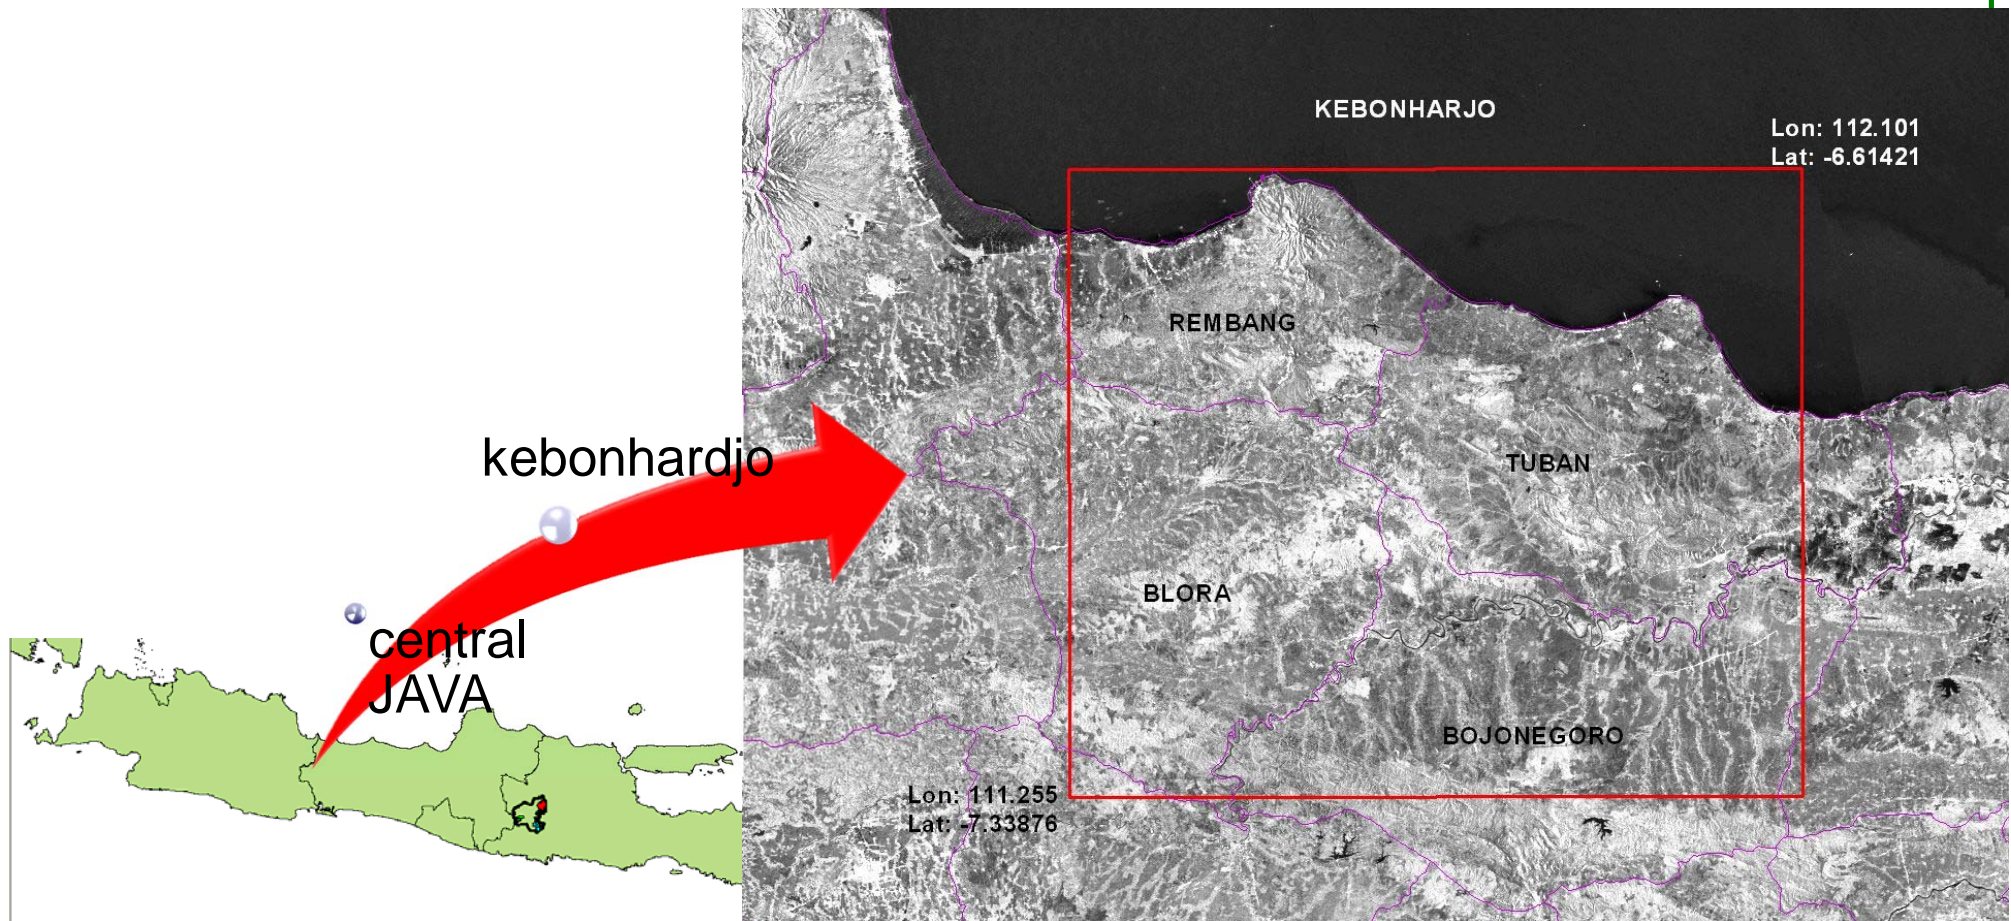

6. MAJENANG, CENTRAL JAVA (MANGROVE FOREST)

ALOS

K&C Initiative
An international science collaboration led by JAXA

7. kebonhardjo, CENTRAL JAVA (MANGROVE FOREST)

Support to JAXA's global forest mapping effort (Focus of the study)

- 1. Site 1 (DRT) : to improve the classification method for estimating biomass stock of peat swamp forest, delineating peat swamp forest ecosystem and mangrove**
- 2. Site 2 (Jambi): improve classification method for biomass estimation of dryland forest and transition ecosystem (jungle rubber, rubber, oil palm)**
- 3. site 3 (North Sumatera 1) the focus will be in developing algorithm to estimate biomass stock of dryland forest and Eucalyptus plantation forest**

**Support to JAXA's global forest mapping effort
(Focus of the study)**

- 4. site 4 (North Sumatra 2) the focus will be in developing algorithm to estimate biomass stock of rubber and oil palm estate crop in North Sumatra**
- 5. Site 5 (Central Java) the focus will be in developing algorithm to delineate mangrove in Majenang**
- 6. Site 6 (Madiun):in developing algorithm to estimate biomass stock of teak forest in Madiun (East Java)**

List ground truth data that will be shared with JAXA:

1. Ground data of peat land forest in Senepis, Riau (Diamond Raya Timber) – approx 50 ~ 100 ground plot – uniformly distributed
2. Ground data in Teak Forest (Madiun East Java) – 38 plots
3. Ground data in dry land forest (30), Eucalyptus Plantation forest (30), Rubber (30) and Oil Palm (30) in North Sumatera
4. Validated map based on ALOS PALSAR (in some areas)

Data required

Study Sites	Main forest cover	Data required
Site 1	Peat land forest	<ul style="list-style-type: none">• ALOS PALSAR FBD (HH+HV) mosaics at 25 m pixel spacing (2007, 2008, 2009, 2010)• JERS-1 SAR (HH) mosaics at 25m pixel spacing (mid 1990's)• ALOS PALSAR ScanSAR (HH) mosaics at 100 m pixel spacing (every cycle, non-gap filled. Foreseen over northern South America Central Africa, Insular SE-Asia, 2007-2010)
Site 2	Peat land and low land forest	Same as above
Site 3	Teak plantation	Same as above
Site 4	Teak and Mangrove	Same as above
Site 5	Dry land forest and Eucalyptus plantation forest	Same as above
Site 6	Rubber and oil palm	Same as above

Deliverables

1. Report of Classification scheme
2. Category developed and validated in forest ecosystem
3. Report of Biomass estimation models for each forest ecosystem
4. Reports on capability of PALSAR for biomass estimation and classification (ACCURACY ASSESSMENT)

THANK YOU VERY MUCH

***COMMENTS AND SUGGESSTION
ARE appreciated***

CONCLUSION ON NATURAL FOREST

1. BACKSCATTER MAGNITUDE AND VARIATION ARE AFFECTED BY STAND VARIABLES
2. ON THE 6.25M-RES → BASAL AREA, BIOMASS AND HEIGHT CLASSES
3. ON THE 50-M RES, BASAL AREA AND TREE BIOMASS

CONCLUSION ON FOREST PLANTATION

1. ON PALSAR 50-M RES → VARIATION OF BACKSCATTER → TREE HEIGHT
2. ON PALSAR 6.25-M, → BY STAND DENSITY AND CROWN COVERAGE.
3. ON PALSAR 6.25-M → 3 CLASSES WITH 85%
4. ON PALSAR 50-M, CAN ONLY BE CLASSIFIED INTO 2 CLASSES WITH 61.7%

CONCLUSION ON RUBBER

1. BACKSCATTER MAG OF RUBBER IS AFFECTED BY:
 - ↓ DBH SIZE AND BASAL AREA FOR ALOS 50-M
 - ↓ DBH SIZE, RATIO TREE-DISTANCE AND CROWN AREA AND BIOMASS VOLUME FOR ALOS 12.5-M
2. ON 50-M AND 12.5-M, 3 CLASSES CAN BE IDENTIFIED WITH 75% ACC AND 72% ACC

CONCLUSION ON OIL PALM

3. BACKSCATTER MAG OF OILPALM IS AFFECTED BY:

- CROWN DIAMETER FOR ALOS 50-M → 2 CLASSES → 92%
- TREE HEIGHT FOR 12.5-M → 3 CLASSES → 65%

4. BACKSCATTER IN HIGHER RES → MUCH NOISE NO SIGNIFICANT IMPROVEMENT FOR CLASSIFICATION

CONCLUSION ON BIOMASS ESTIMATION MODEL

1. Biomass (carbon stock), particularly RUBBER BIOMASS could be estimated using ALOS PALSAR DATA either using original (raw) data or backscatter data
2. OIL PALM AND NATURAL FOREST tend to have a good relationship with the backscatter value of ALOS PALSAR → NEED TO BE MORE EVALUATED.

FURTHER DATA EXPLORATION

1. NATURAL FOREST, FOREST PLANTATION AND OIL PALM → need to be more EXAMINED → LACK OF DATA VARIATION
2. GOOD DATA RECORDS → RUBBER → BIOMASS ESTIMATION

Rubber BIOMASS ESTIMATION using 50-m res

Good model can
be developed
using 50-m res

Rubber BIOMASS ESTIMATION using 12.5 m res

ALOS KUSUMBI Initiative
An international science collaboration led by JAXA

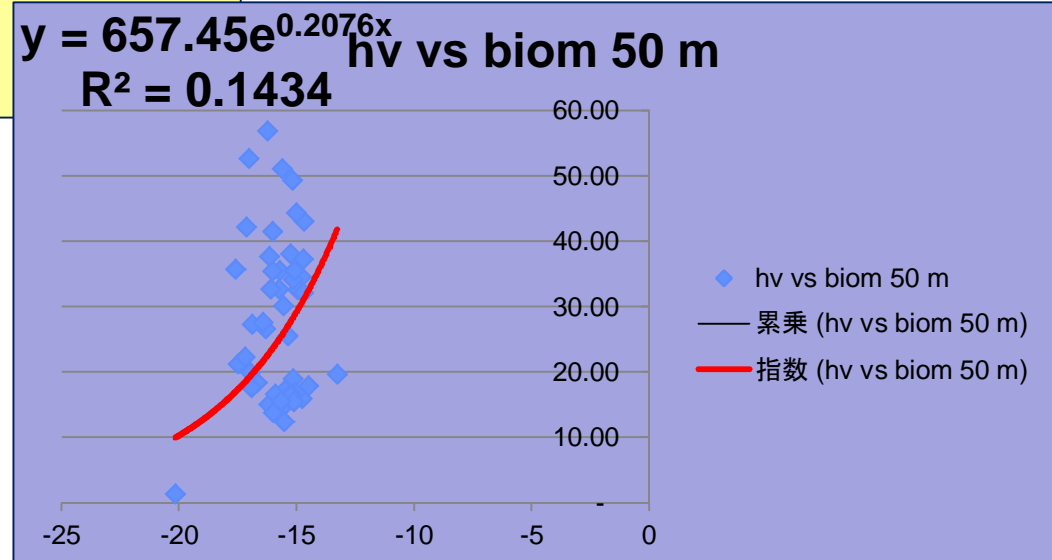

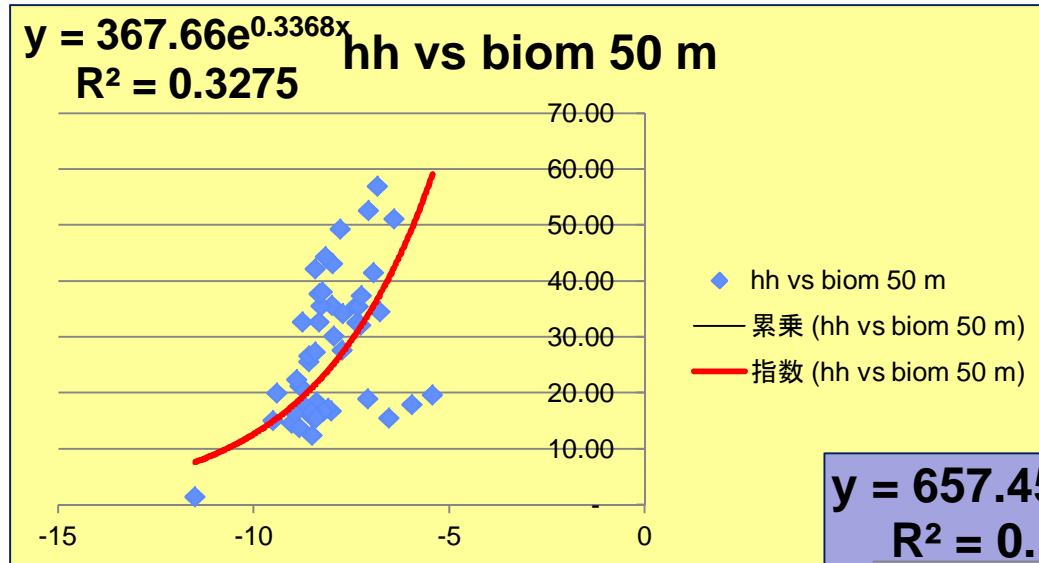

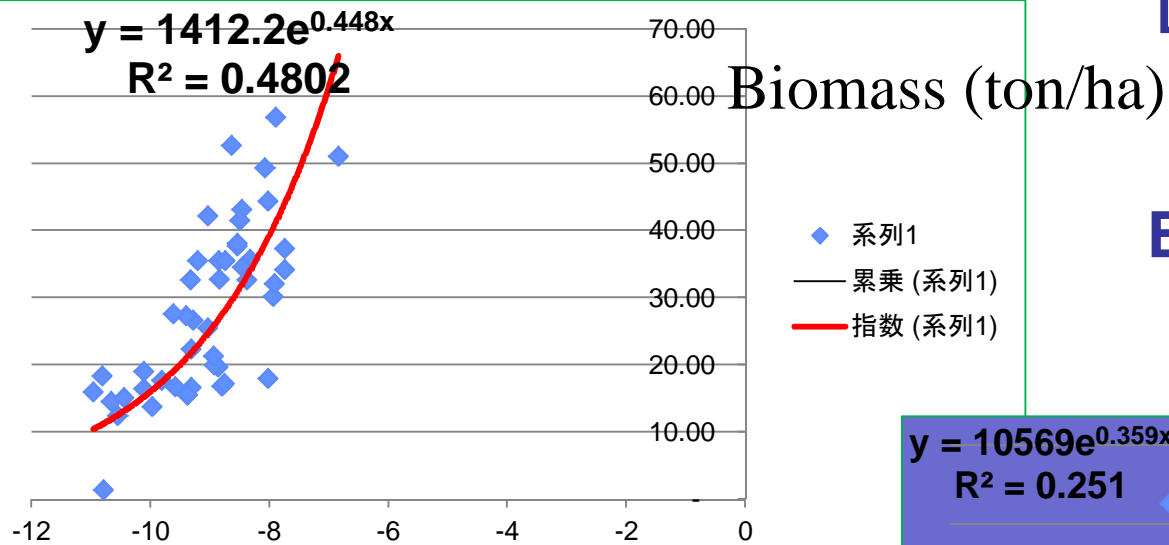

**Better models are
provided using 12.5
res**

Lack of data variation

Oil palm BIOMASS ESTIMATION using 50-m res

Lack of data variation

Oil palm BIOMASS ESTIMATION using 12.5 m res

		Predicted Group Membership			Total
	Class	1	2	3	
	1	50,0	50,0	0	
%	2	2,4	92,9	4,8	
	3	0	0	100,0	

91,1% of original grouped cases correctly classified.
