EarthCARE Science and Validation Workshop 2025

1-5 December 2025 | The University of Tokyo | Tokyo, Japan

Our Objectives:

We investigated the long-term monitoring of aerosol and cloud optical properties at ground-based and maritime measurements since 1990's by using the Sky radiometer (PREDE., Co. Ltd., Tokyo, Japan), based on JAXA RA (ex. GCOM-C/SGLI, EarthCARE). One of the objectives was to understand the effect on earth climate change for interaction of aerosol and cloud, and the other was to validate satellite and models.

In this presentation, I will introduce several observational examples regarding the aerosol optical properties after the launch of the EarthCARE.

What is aureole measurements by Sky radiometer

Ground-based

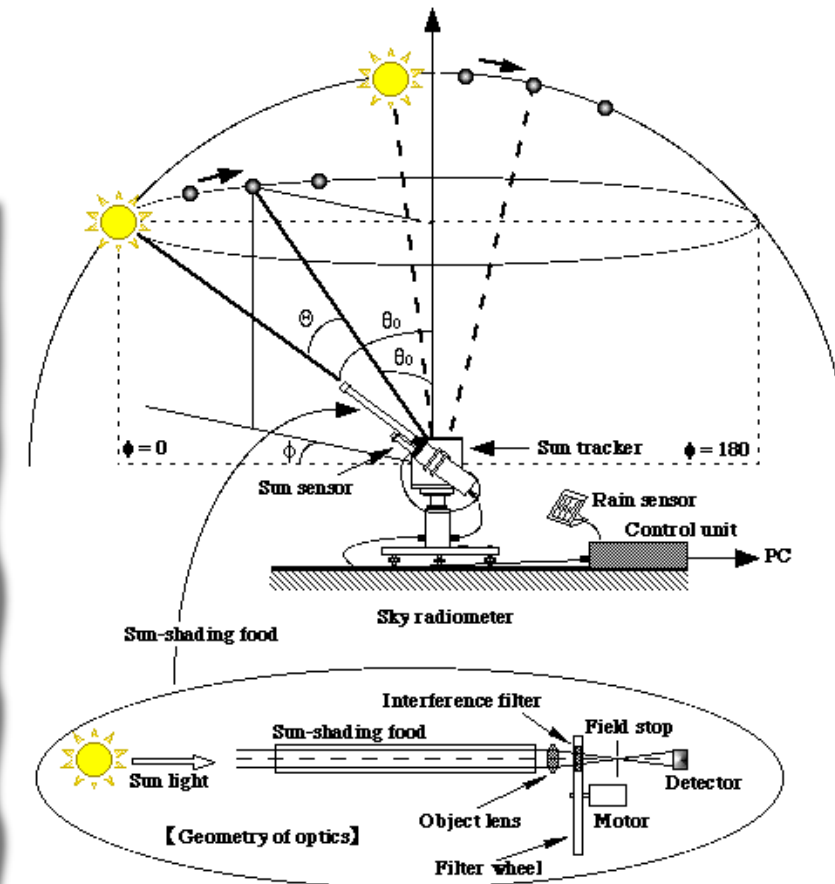

Ship-borne

SKYRADio-net website:

<http://skyrad.sci.u-toyama.ac.jp>

- We observed only in daytime under clear skies at each site.
- Every 10 min/once (aureole)
- Every 1 min/once (direct)
- **POM-01**: 0.315, 0.4, 0.5, 0.675, 0.87, 0.94, 1.02 μm
- **POM-02**: 0.315, 0.34, 0.38, 0.4, 0.5, 0.675, 0.87, 0.94, 1.02, 1.627, 2.2 μm
- AOD (0.355 μm) calculated from Alpha as validation data for EarthCARE.
- Data have been analyzed by an inversion software called **SKYRAD.pack** (Nakajima et al. 1996). Available ver. are SKYRAD.pack 4.2. L0, L1A & L2A.
- Under development using the GRASP algorithm. ([Momoi et al.](#)).
- Ref. ex. Aoki., 2013, Nakajima et al, AMT, 2020, Dubovik et al, 2021

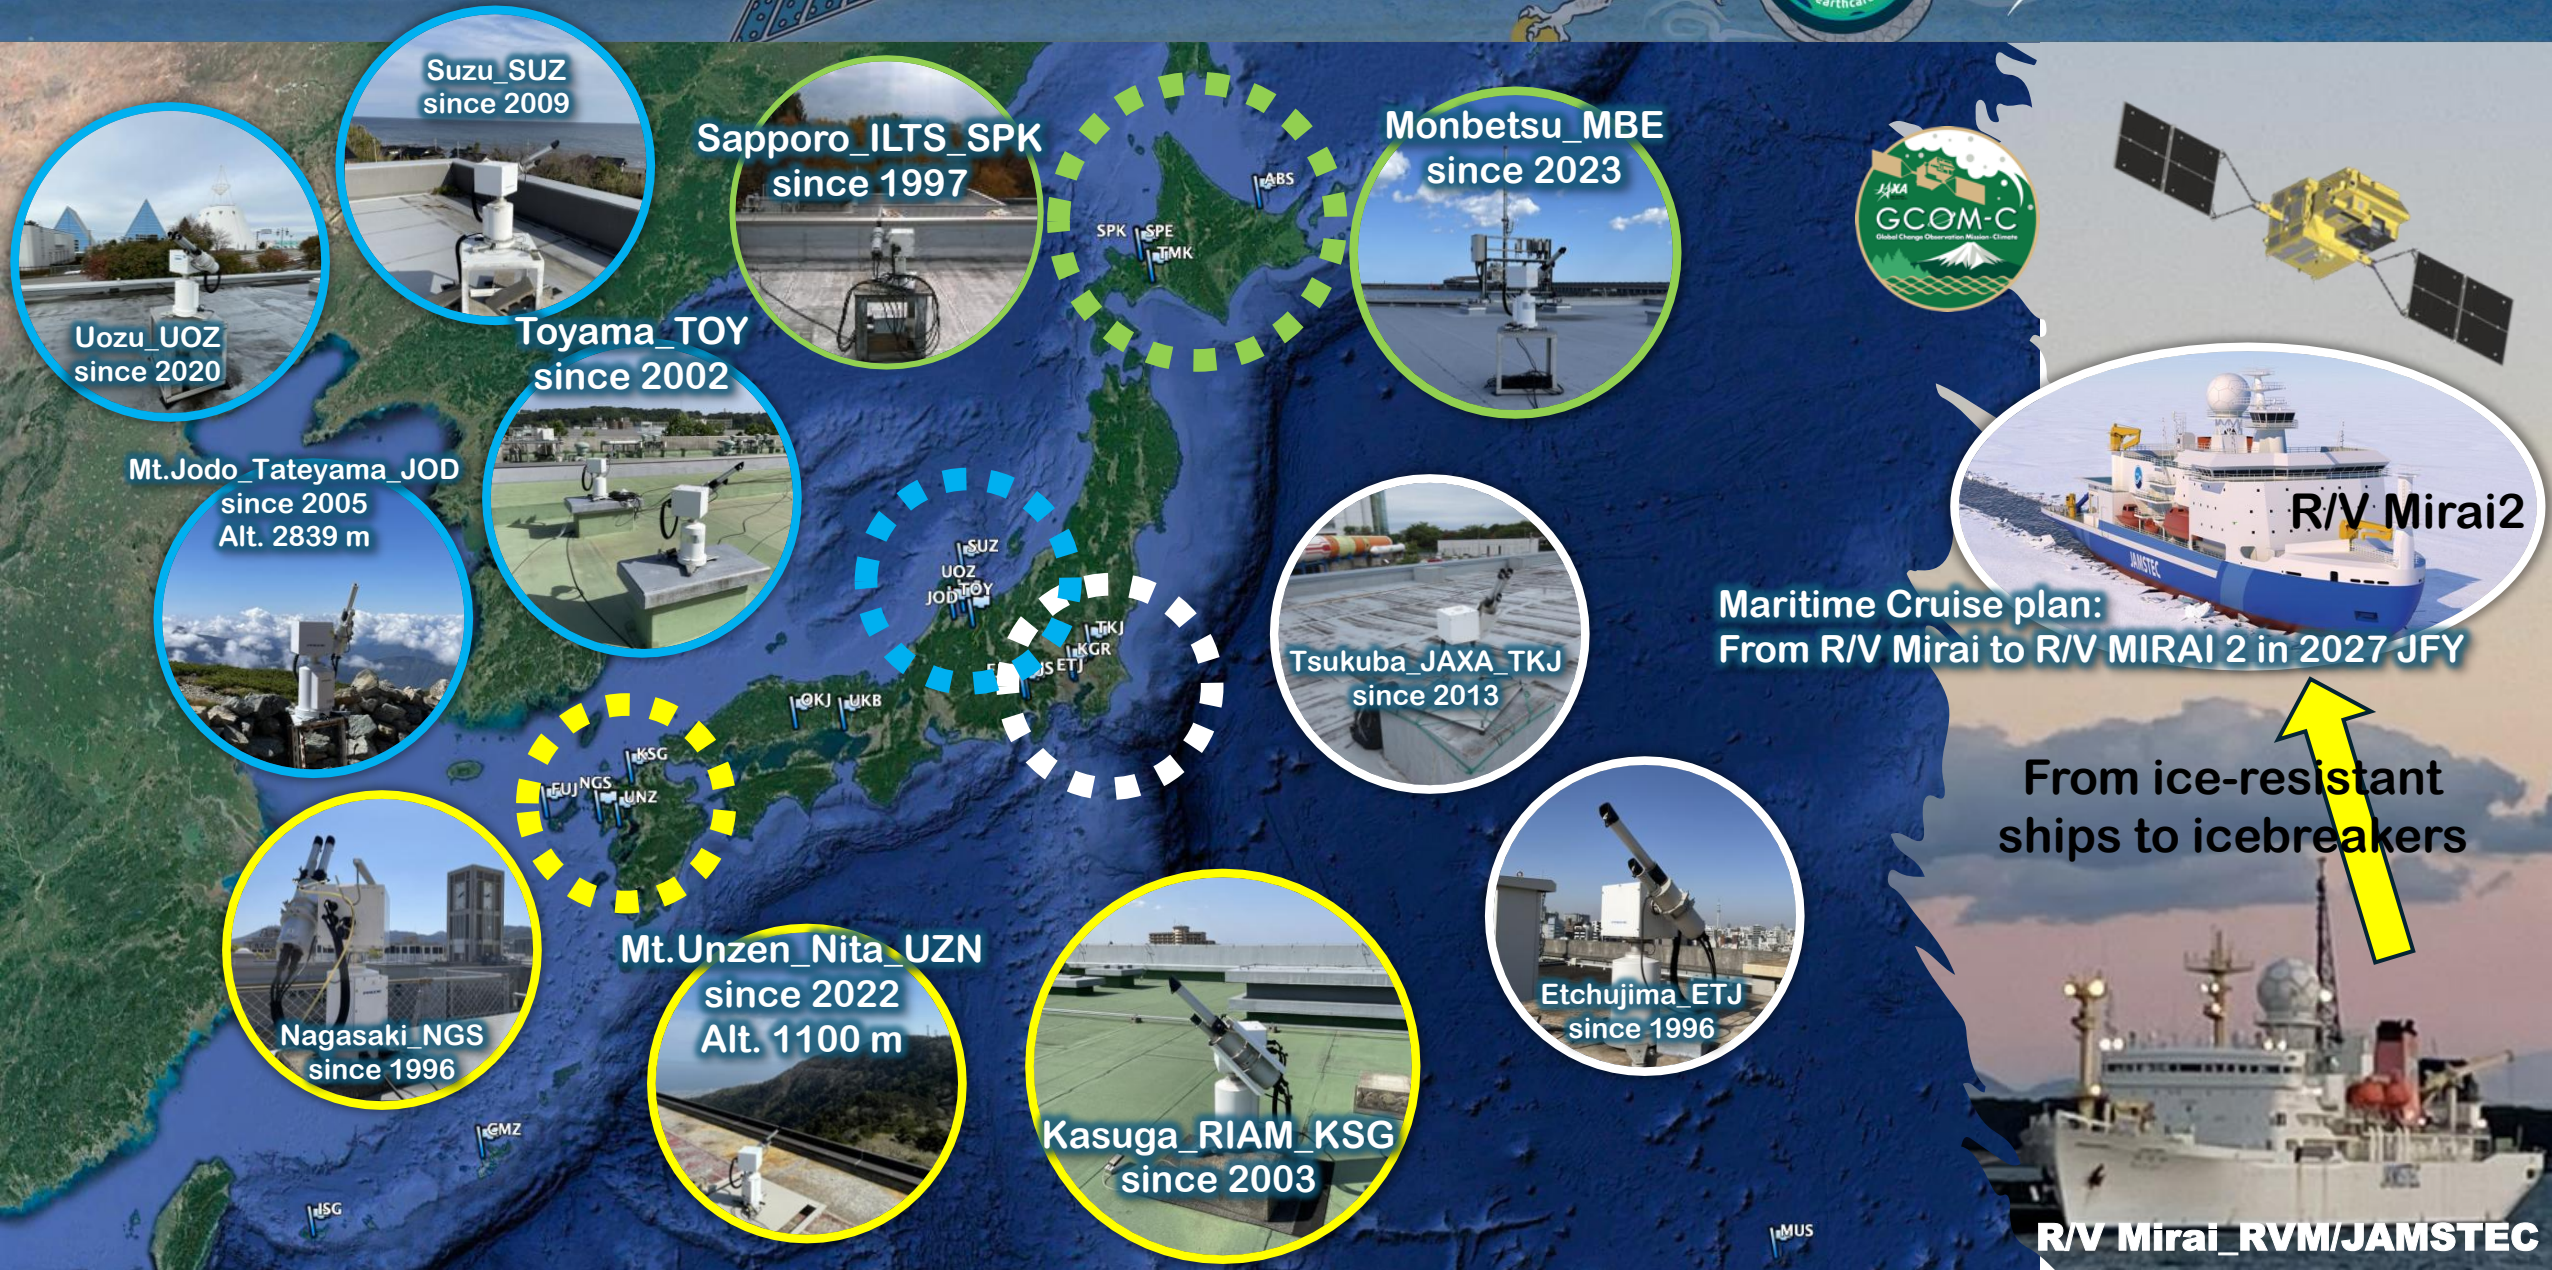

AOD@ Sapporo_SPK since 1997

Aerosol optical depth after lunch at SPK, TOY & KSG

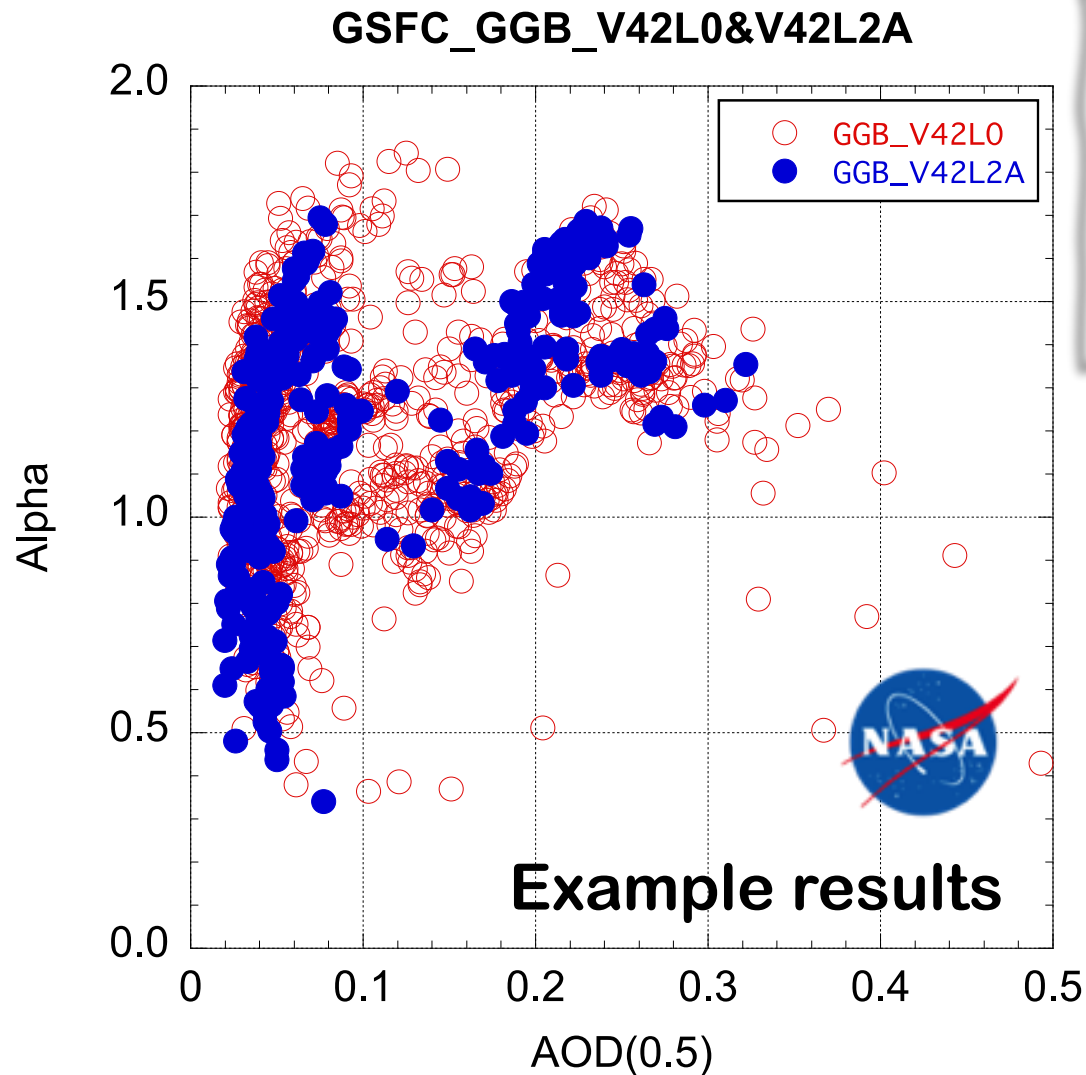

We show the observation of EarthCARE priopd (May 2024 to now) that aerosol optical properties with temporal and spatial variability. The optical thickness has a clear seasonal cycle at Japan site, with a spring to early summer maximum and an autumn to winter minimum. Ångström exponent seems large variability, with a summer maximum and an spring minimum.

(1) Case study of anthropogenic Aerosol to Cloud interactions

@ Aerosol optical properties : Sapporo_SPK_2025.05.13 (05434D)

Quality control in clouds and various factors

We had many observational data, however clouds and various other factors may prevent us from analysis of aerosols.

- ✓ Cloud and/or high aerosols
- ✓ Clouds at scattering angles of 30 degrees and/or more
- ✓ Other and unknown

Mean AOD(0.5) = 0.114
Mean Alpha = 1.207
No. = 956

Mean AOD(0.5) = 0.113
Mean Alpha = 1.234
No. = 333

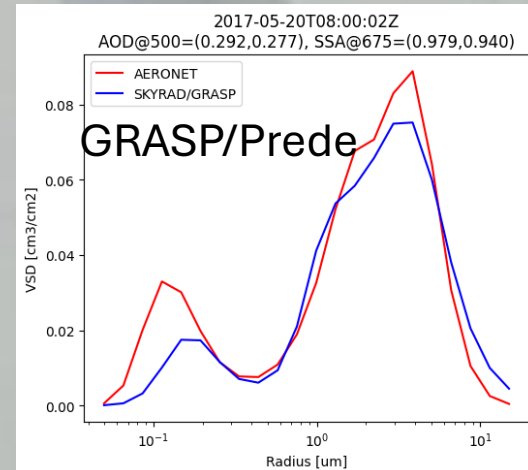

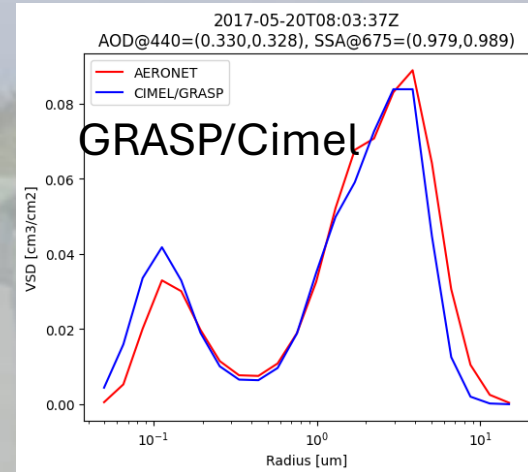

*elimintate data of one third. 956 -> 333 data
Are you (Am I) sure that's the right thing to do?
Especially, aerosol to cloud interactions*

Intercomparison of SKYRAD & Aeronet for GRASP

- Comparison between SKYRAD.pack and GRASP-SKYRAD of aerosol optical properties with temporal and spatial variability in the long-term record.

- Therefore, they are considering how to obtain more detail results of aerosol optical properties

Summary & Plan

We have been able to obtain more than 30 years of Aerosol Optical data from remote-sensing. We will support for EarthCARE validation with a research focus on aerosol to cloud interaction from a many kind of locations, from solar radiation observations to land, over the ocean, mountains and cities and so on. We would like to continue our observations in cooperation and continue our research with new algorithm by GRASP.

EarthCARE Science and Validation Workshop 2025

1-5 December 2025 | The University of Tokyo | Tokyo, Japan
