

GAME-T
THAILAND

■ RECENT WATER RESOURCES RELATED TOPICS IN THAILAND

- **NECESSITY OF RELEVANT RESEARCH** The recent prominent water resource situation in Thailand mainly focused on the problems of drought and flood that resulted from both local causes such as deforestation,
- **PROPOSAL & REQUEST OF JOINT RESEARCH AND THE INFLUENCE OF GAME** decreasing precipitation and growing water abstraction in the upper basin and the influence of global environmental problems.

NECESSITY OF RELEVANT RESEARCH

The relevant researches that could help in resolving water problems and increasing the management efficiency

- Medium and long- range weather prediction over Thailand using climate models.
- Flood warning system
- Drought warning system
- Utilization of satellites and GIS

PROPOSAL & REQUEST OF JOINT RESEARCH OF GAME/GAME-T2

- Social and economic problems on water resources, land use and water management.
- Hydro-meteorological radar network program for reservoir and irrigation management
- Monsoon forecasting and long range weather prediction
- Flood and drought forecasting and warning systems
- Impact of population, land use and industrial growths on the environment and natural water cycle in national and regional scales
